Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

quasilab	11
quasilab.sibilla	11
quasilab.sibilla.core	11
quasylab	11
quasylab.sibilla	11
quasylab.sibilla.core	12
quasylab.sibilla.core.markov	12
quasylab.sibilla.core.models	12
quasylab.sibilla.core.models.pm	13
quasylab.sibilla.core.models.pm.util	13
quasylab.sibilla.core.network	13
quasylab.sibilla.core.network.client	14
quasylab.sibilla.core.network.communication	14
quasylab.sibilla.core.network.compression	15
quasylab.sibilla.core.network.master	15
quasylab.sibilla.core.network.serialization	16
quasylab.sibilla.core.network.slave	16
quasylab.sibilla.core.network.util	16
quasylab.sibilla.core.past	17
quasylab.sibilla.core.past.ds	17
quasylab.sibilla.core.simulator	17
quasylab.sibilla.core.simulator.sampling	18
quasylab.sibilla.core.simulator.tests	18
quasylab.sibilla.core.simulator.tests.pm	18
quasylab.sibilla.core.simulator.util	19
quasylab.sibilla.core.util	19

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

quasylab.sibilla.core.simulator.AbstractSimulationManager< S >	21
quasylab.sibilla.core.simulator.QueuedSimulationManager< S extends State >	108
quasylab.sibilla.core.simulator.SequentialSimulationManager< S extends State >	131
quasylab.sibilla.core.simulator.ThreadSimulationManager< S extends State >	200
quasylab.sibilla.core.models.Action< S >	24
quasylab.sibilla.core.past.Activity	26
quasylab.sibilla.core.past.ds.GetActivity	57
quasylab.sibilla.core.past.SequenceOfActivities	130
quasylab.sibilla.core.markov.BoundedReachabilityContinuousSolver< S >	30
quasylab.sibilla.core.markov.BoundedReachabilityDiscreteSolver< S >	31
quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastReceiver	32
quasylab.sibilla.core.network.serialization.ClassBytesLoader	35
ClassLoader	
quasylab.sibilla.core.network.serialization.CustomClassLoader	45
quasylab.sibilla.core.network.client.ClientCommand	36
quasylab.sibilla.core.network.client.ClientSimulationEnvironment< S extends State >	37
Cloneable	
quasylab.sibilla.core.network.master.MasterState	76
quasylab.sibilla.core.network.master.SimulationState	147
quasylab.sibilla.core.network.NetworkInfo	87
quasylab.sibilla.core.network.slave.SlaveState	163
Comparable	
quasylab.sibilla.core.network.master.MasterState	76
quasylab.sibilla.core.network.master.SimulationState	147
quasylab.sibilla.core.network.compression.Compressor	40
Entry	
quasylab.sibilla.core.util.Pair< K, V >	95

Classes

- class [ComputationResult](#)
- class [HostLoggerSupplier](#)
- class [NetworkInfo](#)
- class [NetworkTask](#)
- class [SimulationDataSet](#)

4.11.1 Detailed Description

Contains all the network related classes of the library.

Author

Belenchia Matteo
Stelluti Francesco Pio
Zamponi Marco

4.12 Package `quasylab.sibilla.core.network.client`

Classes

- enum [ClientCommand](#)
- class [ClientSimulationEnvironment](#)

4.12.1 Detailed Description

Contains the classes that manage the behavior of a client that submits simulations to a master server.

Author

Stelluti Francesco Pio
Zamponi Marco

4.13 Package `quasylab.sibilla.core.network.communication`

Classes

- interface [NetworkManagerType](#)
- class [TCPDefaultNetworkManager](#)
- interface [TCPNetworkManager](#)
- enum [TCPNetworkManagerType](#)
- class [TCPSecureNetworkManager](#)
- class [UDPDefaultNetworkManager](#)
- interface [UDPNetworkManager](#)
- enum [UDPNetworkManagerType](#)

4.13.1 Detailed Description

Contains the classes that manage the communication between hosts in the network.

@author Belenchia Matteo

Author

Stelluti Francesco Pio

Zamponi Marco

4.14 Package `quasylab.sibilla.core.network.compression`

Classes

- class [Compressor](#)

4.14.1 Detailed Description

Contains the classes that manage the data compression and decompression.

Author

Stelluti Francesco Pio

Zamponi Marco

4.15 Package `quasylab.sibilla.core.network.master`

Classes

- enum [MasterCommand](#)
- class [MasterServerSimulationEnvironment](#)
- class [MasterState](#)
- class [NetworkSimulationManager](#)
- class [SimulationState](#)

4.15.1 Detailed Description

Contains the classes that manage the behavior of a master that submits clients' simulations received to registered slave servers.

Author

Stelluti Francesco Pio

Zamponi Marco

4.16 Package `quasylab.sibilla.core.network.serialization`

Classes

- class [ClassBytesLoader](#)
- class [CustomClassLoader](#)
- class [Serializer](#)

4.16.1 Detailed Description

Contains the classes that manage the data serialization.

Author

Stelluti Francesco Pio
Zamponi Marco

4.17 Package `quasylab.sibilla.core.network.slave`

Classes

- class [BasicSimulationServer](#)
- class [DiscoverableBasicSimulationServer](#)
- interface [SimulationServer](#)
- enum [SlaveCommand](#)
- class [SlaveState](#)

4.17.1 Detailed Description

Contains the classes that manage the behavior of a slave that receives submitted simulations from a master server.

Author

Belenchia Matteo
Stelluti Francesco Pio
Zamponi Marco

4.18 Package `quasylab.sibilla.core.network.util`

Classes

- class [NetworkUtils](#)
- class [SSLUtils](#)
- class [StartupUtils](#)

4.18.1 Detailed Description

Contains utility classes that are used in the library.

Author

Stelluti Francesco Pio

Zamponi Marco

Class Documentation

5.1 `quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >` Class Template Reference

Inheritance diagram for `quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >`:

Public Member Functions

- `AbstractSimulationManager` (`RandomGenerator` random, `SimulationMonitor` monitor, `Consumer< Trajectory< S >>` trajectoryConsumer)
- synchronized void `simulate` (`SimulationUnit< S >` unit)
- `SimulationMonitor` `getMonitor` ()
- int `computedTrajectories` ()
- double `averageExecutionTime` ()
- synchronized boolean `isRunning` ()
- void `shutdown` () throws `InterruptedException`

Protected Member Functions

- synchronized void `handleTrajectory` (`Trajectory< S >` trj)
- abstract void `handleTask` (`SimulationTask< S >` simulationTask)
- synchronized void `setRunning` (boolean flag)
- void `notifyMonitorStartIteration` (int iterationIndex)
- void `notifyMonitorEndIteration` (int iterationIndex)

5.1.1 Constructor & Destructor Documentation

5.1.1.1 AbstractSimulationManager()

```
quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >.AbstractSimulationManager
(
    RandomGenerator random,
    SimulationMonitor monitor,
    Consumer< Trajectory< S >> trajectoryConsumer )
```

5.1.2 Member Function Documentation

5.1.2.1 averageExecutionTime()

```
double quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >.average↵
ExecutionTime ( )
```

5.1.2.2 computedTrajectories()

```
int quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >.computed↵
Trajectories ( )
```

5.1.2.3 getMonitor()

```
SimulationMonitor quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State
>.getMonitor ( )
```

5.1.2.4 handleTask()

```
abstract void quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State >.handle↵
Task (
    SimulationTask< S > simulationTask ) [abstract], [protected]
```

5.1.2.5 handleTrajectory()

```
synchronized void quasylab.sibilla.core.simulator.AbstractSimulationManager< S extends State
>.handleTrajectory (
    Trajectory< S > trj ) [protected]
```

Handles the trajectory given in input

Parameters

<i>trj</i>	trajectory to be handled
------------	--------------------------

5.1.2.6 isRunning()

```
synchronized boolean quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State >.isRunning ( )
```

5.1.2.7 notifyMonitorEndIteration()

```
void quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State >.notifyMonitorEndIteration (
    int iterationIndex ) [protected]
```

5.1.2.8 notifyMonitorStartIteration()

```
void quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State >.notifyMonitorStartIteration (
    int iterationIndex ) [protected]
```

5.1.2.9 setRunning()

```
synchronized void quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State >.setRunning (
    boolean flag ) [protected]
```

5.1.2.10 shutdown()

```
void quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State >.shutdown ( )
throws InterruptedException
```

5.1.2.11 simulate()

```
synchronized void quasylib.sibilla.core.simulator.AbstractSimulationManager< S extends State
>.simulate (
    SimulationUnit< S > unit )
```

5.2 quasylib.sibilla.core.models.Action< S > Interface Template Reference

Public Member Functions

- double [probability](#) ()
- [TimeStep](#)< S > [execute](#) (RandomGenerator r)
- S [revert](#) ()
- static< S > [Action](#)< S > [actionOfMarkovStepFunction](#) (double now, double totalRate, double stepRate, S state, [StepFunction](#)< S > f)

5.2.1 Detailed Description

Represents an action that may change current state of a model. When action is executed, it duration time is sampled together with the next state. An action is selected with a given probability. Moreover an action can be reverted to obtain the state originating the action.

Parameters

<S>	type of model state.
-----	----------------------

5.2.2 Member Function Documentation

5.2.2.1 actionOfMarkovStepFunction()

```
static<S> Action<S> quasylib.sibilla.core.models.Action< S >.actionOfMarkovStepFunction (
    double now,
    double totalRate,
    double stepRate,
    S state,
    StepFunction< S > f )
```

Utility method that is used to create the action associated to a transition in a markov process.

Parameters

<i>now</i>	time when the transition is performed.
<i>totalRate</i>	total exit rate of current state.
<i>stepRate</i>	rate of the selected step.
<i>state</i>	current state.
<i>f</i>	lazy function used to compute next state.
<S>	type of states of Markov process.

Returns

the action associated to a transition in a markov process.

5.2.2.2 execute()

```
TimeStep<S> quasylab.sibilla.core.models.Action< S >.execute (
    RandomGenerator r )
```

Returns the model state after action execution. The `RandomGenerator` is the one used by the action to sample possible random values.

Parameters

<i>r</i>	random generator used to sample needed random variables.
----------	--

Returns

result of action execution.

5.2.2.3 probability()

```
double quasylab.sibilla.core.models.Action< S >.probability ( )
```

Returns the probability that this action is selected as next step.

Returns

the probability that this action is selected as next step.

5.2.2.4 revert()

```
S quasylab.sibilla.core.models.Action< S >.revert ( )
```

Returns the model state before action execution.

Returns

model state before action execution.

5.3 quasylib.sibilla.core.past.Activity Interface Reference

Inheritance diagram for quasylib.sibilla.core.past.Activity:

Public Member Functions

- String [getName](#) ()
- boolean [execute](#) (RandomGenerator r, double now, double dt)

5.3.2 Member Function Documentation

5.3.2.1 execute()

```

boolean quasylib.sibilla.core.past.Activity.execute (
    RandomGenerator r,
    double now,
    double dt )
  
```

Implemented in [quasylib.sibilla.core.past.ds.GetActivity](#), and [quasylib.sibilla.core.past.SequenceOfActivities](#).

5.3.2.2 getName()

```

String quasylib.sibilla.core.past.Activity.getName ( )
  
```

Implemented in [quasylib.sibilla.core.past.SequenceOfActivities](#), and [quasylib.sibilla.core.past.ds.GetActivity](#).

5.4 quasylab.sibilla.core.past.ds.ActualTemplateField Class Reference

Inheritance diagram for quasylab.sibilla.core.past.ds.ActualTemplateField:

Public Member Functions

- [ActualTemplateField](#) (Object o)
- boolean [match](#) (Object o)
- int [hashCode](#) ()
- boolean [equals](#) (Object obj)
- String [toString](#) ()
- boolean [implies](#) ([TemplateField](#) f)

5.4.1 Detailed Description

Author

loreti

5.4.2 Constructor & Destructor Documentation

5.4.2.1 ActualTemplateField()

```
quasylab.sibilla.core.past.ds.ActualTemplateField.ActualTemplateField (  
    Object o )
```

5.4.3 Member Function Documentation

5.4.3.1 equals()

```
boolean quasylab.sibilla.core.past.ds.ActualTemplateField.equals (  
    Object obj )
```

5.4.3.2 hashCode()

```
int quasylib.sibilla.core.past.ds.ActualTemplateField.hashCode ( )
```

5.4.3.3 implies()

```
boolean quasylib.sibilla.core.past.ds.ActualTemplateField.implies (
    TemplateField f )
```

Implements [quasylib.sibilla.core.past.ds.TemplateField](#).

5.4.3.4 match()

```
boolean quasylib.sibilla.core.past.ds.ActualTemplateField.match (
    Object o )
```

Implements [quasylib.sibilla.core.past.ds.TemplateField](#).

5.4.3.5 toString()

```
String quasylib.sibilla.core.past.ds.ActualTemplateField.toString ( )
```

5.5 quasylib.sibilla.core.network.slave.BasicSimulationServer Class Reference

Inheritance diagram for quasylib.sibilla.core.network.slave.BasicSimulationServer:

Public Member Functions

- [BasicSimulationServer](#) ([TCPNetworkManagerType](#) networkManagerType)
- void [start](#) (int port)

Protected Attributes

- Logger [LOGGER](#)
- [NetworkInfo](#) [localServerInfo](#)

5.5.1 Detailed Description

Represent a simple server that executes the simulations passed by a master server

Author

Belenchia Matteo

Stelluti Francesco Pio

Zamponi Marco

5.5.2 Constructor & Destructor Documentation

5.5.2.1 BasicSimulationServer()

```
quasylib.sibilla.core.network.slave.BasicSimulationServer.BasicSimulationServer (
    TCPNetworkManagerType networkManagerType )
```

Creates a simulation server with the given network manager type

Parameters

<i>networkManagerType</i>	type of the network manager
---------------------------	-----------------------------

5.5.3 Member Function Documentation

5.5.3.1 start()

```
void quasylib.sibilla.core.network.slave.BasicSimulationServer.start (
    int port )
```

Creates and starts the slave server on the given port.

Parameters

<i>port</i>	port used by the slave server to manage the incoming requests from the master servers
-------------	---

Exceptions

<i>IOException</i>	when problems arise in network interfaces usage
--------------------	---

Implements [quasylab.sibilla.core.network.slave.SimulationServer](#).

5.5.4 Member Data Documentation**5.5.4.1 localServerInfo**

[NetworkInfo](#) `quasylab.sibilla.core.network.slave.BasicSimulationServer.localServerInfo` [protected]

Slave server network communication related info.

5.5.4.2 LOGGER

`Logger` `quasylab.sibilla.core.network.slave.BasicSimulationServer.LOGGER` [protected]

Class logger.

5.6 [quasylab.sibilla.core.markov.BoundedReachabilityContinuous](#) **Solver< S > Class Template** **Reference**

Public Member Functions

- [BoundedReachabilityContinuousSolver](#) ([ContinuousTimeMarkovChain](#)< S > chain, double epsilon, Predicate< S > condition, Predicate< S > goal)
- [BoundedReachabilityContinuousSolver](#) ([ContinuousTimeMarkovChain](#)< S > chain, double epsilon, Predicate< S > goal)
- Map< S, Double > [compute](#) (double t)

5.6.1 Detailed Description**Author**

loreti

Parameters

<S>	
-----	--

5.6.2 Constructor & Destructor Documentation

5.6.2.1 BoundedReachabilityContinuousSolver() [1/2]

```
quasylib.sibilla.core.markov.BoundedReachabilityContinuousSolver< S >.BoundedReachabilityContinuousSolver
(
    ContinuousTimeMarkovChain< S > chain,
    double epsilon,
    Predicate< S > condition,
    Predicate< S > goal )
```

5.6.2.2 BoundedReachabilityContinuousSolver() [2/2]

```
quasylib.sibilla.core.markov.BoundedReachabilityContinuousSolver< S >.BoundedReachabilityContinuousSolver
(
    ContinuousTimeMarkovChain< S > chain,
    double epsilon,
    Predicate< S > goal )
```

5.6.3 Member Function Documentation

5.6.3.1 compute()

```
Map<S,Double> quasylib.sibilla.core.markov.BoundedReachabilityContinuousSolver< S >.compute (
    double t )
```

5.7 quasylib.sibilla.core.markov.BoundedReachabilityDiscreteSolver< S > Class Template Reference

Public Member Functions

- [BoundedReachabilityDiscreteSolver](#) ([DiscreteTimeMarkovChain](#)< S > chain, Predicate< S > condition, Predicate< S > goal)
- [BoundedReachabilityDiscreteSolver](#) ([DiscreteTimeMarkovChain](#)< S > chain, Predicate< S > goal)
- Map< S, Double > [compute](#) (int k)

5.7.1 Detailed Description

Author

loreti

Parameters

<S>	
-----	--

5.7.2 Constructor & Destructor Documentation

5.7.2.1 BoundedReachabilityDiscreteSolver() [1/2]

```
quasylab.sibilla.core.markov.BoundedReachabilityDiscreteSolver< S >.BoundedReachabilityDiscreteSolver
(
    DiscreteTimeMarkovChain< S > chain,
    Predicate< S > condition,
    Predicate< S > goal )
```

5.7.2.2 BoundedReachabilityDiscreteSolver() [2/2]

```
quasylab.sibilla.core.markov.BoundedReachabilityDiscreteSolver< S >.BoundedReachabilityDiscreteSolver
(
    DiscreteTimeMarkovChain< S > chain,
    Predicate< S > goal )
```

5.7.3 Member Function Documentation

5.7.3.1 compute()

```
Map<S,Double> quasylab.sibilla.core.markov.BoundedReachabilityDiscreteSolver< S >.compute (
    int k )
```

5.8 quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastReceiver Class Reference

Public Member Functions

- [BroadcastReceiver](#) (int receiver, Function< [PopulationState](#), Double > receivingProbability, Function< RandomGenerator, Integer > step)
- int [getReceiver](#) ()
- Function< [PopulationState](#), Double > [getReceivingProbability](#) ()

5.8.1 Constructor & Destructor Documentation

5.8.1.1 BroadcastReceiver()

```
quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastReceiver.BroadcastReceiver (
    int receiver,
    Function< PopulationState, Double > receivingProbability,
    Function< RandomGenerator, Integer > step )
```

Parameters

<i>receiver</i>	
<i>receivingProbability</i>	

5.8.2 Member Function Documentation

5.8.2.1 getReceiver()

```
int quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastReceiver.getReceiver ( )
```

Returns

the receiver

5.8.2.2 getReceivingProbability()

```
Function<PopulationState, Double> quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastReceiver.getReceivingProbability ( )
```

Returns

the receivingProbability

5.9 quasylab.sibilla.core.models.pm.BroadcastRule Class Reference

Inheritance diagram for quasylab.sibilla.core.models.pm.BroadcastRule:

Classes

- class [BroadcastReceiver](#)

Public Member Functions

- [BroadcastRule](#) (String name, Function< [PopulationState](#), Double > rateFunction, int senderIndex, Function< RandomGenerator, Integer > step, BroadcastReceiver... receivers)
- [PopulationTransition apply](#) (RandomGenerator r, double now, [PopulationState](#) state)

Static Public Member Functions

- static [Update getDrift](#) (String name, RandomGenerator r, int sender, [PopulationState](#) state, Function< RandomGenerator, Integer > step, [BroadcastReceiver](#)[] receivers)

5.9.1 Detailed Description

This kind of rule is used to describe a one-to-many interaction. An element of the population is sending a message that can be received, with a given probabilities, by a group of elements of other species.

5.9.2 Constructor & Destructor Documentation

5.9.2.1 BroadcastRule()

```
quasylab.sibilla.core.models.pm.BroadcastRule.BroadcastRule (
    String name,
    Function< PopulationState, Double > rateFunction,
    int senderIndex,
    Function< RandomGenerator, Integer > step,
    BroadcastReceiver... receivers )
```

Creates a new rule.

Parameters

<i>name</i>	rule name.
<i>rateFunction</i>	rate function.
<i>senderIndex</i>	index of sender.
<i>step</i>	sender next state.
<i>receivers</i>	message receivers.

5.9.3 Member Function Documentation

5.9.3.1 apply()

```
PopulationTransition quasylab.sibilla.core.models.pm.BroadcastRule.apply (
    RandomGenerator r,
    double now,
    PopulationState state )
```

Apply the rule to a state at a given time.

Parameters

<i>r</i>	randome
<i>now</i>	
<i>state</i>	

Returns

Implements [quasylab.sibilla.core.models.pm.PopulationRule](#).

5.9.3.2 getDrift()

```
static Update quasylab.sibilla.core.models.pm.BroadcastRule.getDrift (
    String name,
    RandomGenerator r,
    int sender,
    PopulationState state,
    Function< RandomGenerator, Integer > step,
    BroadcastReceiver[] receivers ) [static]
```

5.10 quasylab.sibilla.core.network.serialization.ClassBytesLoader Class Reference

Static Public Member Functions

- static byte[] [loadClassBytes](#) (String className) throws IOException

5.10.1 Detailed Description

Utility class used to extract the data associated to the .class file of a compiled Java class.

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.10.2 Member Function Documentation

5.10.2.1 loadClassBytes()

```
static byte [] quasylib.sibilla.core.network.serialization.ClassBytesLoader.loadClassBytes (
    String className ) throws IOException [static]
```

Parameters

<i>className</i>	of the class which data need to be extracted.
------------------	---

Returns

byte array containing the data associated to the .class file related to the qualified name passed as an argument.

Exceptions

<i>IOException</i>	
--------------------	--

5.11 quasylib.sibilla.core.network.client.ClientCommand Enum Reference

Public Attributes

- [INIT](#)
- [DATA](#)
- [PING](#)
- [CLOSE_CONNECTION](#)

5.11.1 Detailed Description

All the possible command that can be sent from a client.

Author

Stelluti Francesco Pio
Zamponi Marco

5.11.2 Member Data Documentation

5.11.2.1 CLOSE_CONNECTION

```
quasylab.sibilla.core.network.client.ClientCommand.CLOSE_CONNECTION
```

The command sent by a client to inform that the connection with an host will be closed.

5.11.2.2 DATA

```
quasylab.sibilla.core.network.client.ClientCommand.DATA
```

The command sent by a client to signal that data will be passed over the network.

5.11.2.3 INIT

```
quasylab.sibilla.core.network.client.ClientCommand.INIT
```

The command sent by a client to initiate a new connection over the network.

5.11.2.4 PING

```
quasylab.sibilla.core.network.client.ClientCommand.PING
```

The command sent by a client to ping an host which has a connection open with.

5.12 `quasylab.sibilla.core.network.client.ClientSimulationEnvironment`< S extends State > Class Template Reference

Public Member Functions

- [ClientSimulationEnvironment](#) (RandomGenerator random, [ModelDefinition](#)< S > modelDefinition, [Model](#)< S > model, S initialState, [SamplingFunction](#)< S > sampling_function, int replica, double deadline, [NetworkInfo](#) masterNetworkInfo)

5.12.1 Detailed Description

Manages the connection with a master server to submit simulations and retrieve related results.

Parameters

< S >	The quasylab.sibilla.core.past.State of the simulation model.
-------	---

Author

Stelluti Francesco Pio
Zamponi Marco

5.12.2 Constructor & Destructor Documentation

5.12.2.1 ClientSimulationEnvironment()

```
quasylab.sibilla.core.network.client.ClientSimulationEnvironment< S extends State >.ClientSimulationEnvironment(
    RandomGenerator random,
    ModelDefinition< S > modelDefinition,
    Model< S > model,
    S initialState,
    SamplingFunction< S > sampling_function,
    int replica,
    double deadline,
    NetworkInfo masterNetworkInfo )
```

Initiates a new client that submits simulations using the parameters of the simulation to execute and the network related data of the master server that will manage such simulation.

Parameters

<i>random</i>	org.apache.commons.math3.random.RandomGenerator of the simulation.
<i>modelDefinition</i>	quasylab.sibilla.core.models.ModelDefinition that defines the simulation model to be sent.
<i>model</i>	The quasylab.sibilla.core.models.Model of the simulation.
<i>initialState</i>	The initial quasylab.sibilla.core.past.State of the model.
<i>sampling_function</i>	The quasylab.sibilla.core.simulator.sampling.SamplingFunction that will be used to collect data.
<i>replica</i>	Repetitions of the simulation.
<i>deadline</i>	Time interval between two samplings.
<i>masterNetworkInfo</i>	quasylab.sibilla.core.network.NetworkInfo of the master to be reached.

5.13 quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S > Class Template Reference

Inheritance diagram for quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S >:

Public Member Functions

- String [toString](#) ()
- [ComposedWeightedStructure](#) ()

- [ComposedWeightedStructure](#) ([WeightedStructure](#)< S > left, [WeightedStructure](#)< S > right)
- double [getTotalWeight](#) ()
- [WeightedElement](#)< S > [select](#) (double w)
- [WeightedStructure](#)< S > [add](#) (double w, S s)
- [WeightedStructure](#)< S > [add](#) ([WeightedStructure](#)< S > s)
- List< [WeightedElement](#)< S > > [getAll](#) ()

5.13.1 Detailed Description

Author

loreti

5.13.2 Constructor & Destructor Documentation

5.13.2.1 ComposedWeightedStructure() [1/2]

```
quasylib.sibilla.core.simulator.util.ComposedWeightedStructure< S >.ComposedWeightedStructure
( )
```

5.13.2.2 ComposedWeightedStructure() [2/2]

```
quasylib.sibilla.core.simulator.util.ComposedWeightedStructure< S >.ComposedWeightedStructure
(
    WeightedStructure< S > left,
    WeightedStructure< S > right )
```

5.13.3 Member Function Documentation

5.13.3.1 add() [1/2]

```
WeightedStructure<S> quasylib.sibilla.core.simulator.util.ComposedWeightedStructure< S >.add
(
    double w,
    S s )
```

Implements [quasylib.sibilla.core.simulator.util.WeightedStructure](#)< S >.

5.13.3.2 add() [2/2]

```
WeightedStructure<S> quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S >.add
(
    WeightedStructure< S > s )
```

Implements [quasylab.sibilla.core.simulator.util.WeightedStructure< S >](#).

5.13.3.3 getAll()

```
List<WeightedElement<S> > quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S
>.getAll ( )
```

Implements [quasylab.sibilla.core.simulator.util.WeightedStructure< S >](#).

5.13.3.4 getTotalWeight()

```
double quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S >.getTotalWeight ( )
```

Implements [quasylab.sibilla.core.simulator.util.WeightedStructure< S >](#).

5.13.3.5 select()

```
WeightedElement<S> quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S >.select
(
    double w )
```

Implements [quasylab.sibilla.core.simulator.util.WeightedStructure< S >](#).

5.13.3.6 toString()

```
String quasylab.sibilla.core.simulator.util.ComposedWeightedStructure< S >.toString ( )
```

5.14 quasylab.sibilla.core.network.compression.Compressor Class Reference

Static Public Member Functions

- static byte[] [compress](#) (byte[] decompressedData)
- static byte[] [decompress](#) (byte[] compressedData)

5.14.1 Detailed Description

Utility class used to compress and decompress byte arrays containing data. The class operations are based upon the tool GZIP.

Author

Stelluti Francesco Pio

Zamponi Marco

5.14.2 Member Function Documentation

5.14.2.1 compress()

```
static byte [] quasylib.sibilla.core.network.compression.Compressor.compress (  
    byte[] decompressedData ) [static]
```

Compresses a byte array.

Parameters

<i>decompressedData</i>	byte array to be compressed
-------------------------	-----------------------------

Returns

compressed byte array

5.14.2.2 decompress()

```
static byte [] quasylib.sibilla.core.network.compression.Compressor.decompress (  
    byte[] compressedData ) [static]
```

Decompresses a byte array.

Parameters

<i>compressedData</i>	byte array to be decompressed
-----------------------	-------------------------------

Returns

decompressed byte array

5.15 quasylib.sibilla.core.network.ComputationResult< S extends State > Class Template Reference

Inheritance diagram for quasylib.sibilla.core.network.ComputationResult< S extends State >:

Public Member Functions

- [ComputationResult](#) (LinkedList< [Trajectory](#)< S >> results)
- List< [Trajectory](#)< S >> [getResults](#) ()

5.15.1 Detailed Description

Class that stores the results of a simulation executed by a slave.

Parameters

<S>	The quasylib.sibilla.core.past.State of the simulation model.
-----	---

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.15.2 Constructor & Destructor Documentation

5.15.2.1 ComputationResult()

```
quasylib.sibilla.core.network.ComputationResult< S extends State >.ComputationResult (
    LinkedList< Trajectory< S >> results )
```

Creates a new [ComputationResult](#) object with the list of trajectories passed in input

Parameters

<i>results</i>	list of trajectories that compose the result of a simulation
----------------	--

5.15.3 Member Function Documentation

5.15.3.1 getResults()

```
List<Trajectory<S> > quasylib.sibilla.core.network.ComputationResult< S extends State >.get←↵
Results ( )
```

Returns the list of trajectories of a simulation

Returns

list of trajectories that compose the result of a simulation

5.16 quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S > Class Template Reference

Inheritance diagram for quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >:

Public Member Functions

- void [add](#) (S s, Map< S, Double > row)
- Map< S, Double > [probabilityMatrixRow](#) (S s)
- Map< S, Double > [uniformisedMatrixRow](#) (S s)
- Stream< [Pair](#)< S, Double > > [rateMatrixRow](#) (S s)
- double [getMaxRate](#) ()

Additional Inherited Members

5.16.1 Detailed Description

Author

loreti

5.16.2 Member Function Documentation

5.16.2.1 add()

```
void quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >.add (
    S s,
    Map< S, Double > row )
```

Reimplemented from [quasylib.sibilla.core.markov.MarkovChain< S >](#).

5.16.2.2 getMaxRate()

```
double quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >.getMaxRate ( )
```

5.16.2.3 probabilityMatrixRow()

```
Map<S,Double> quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >.probabilityMatrix↵
Row (
    S s )
```

Reimplemented from [quasylib.sibilla.core.markov.MarkovChain< S >](#).

5.16.2.4 rateMatrixRow()

```
Stream<Pair<S, Double> > quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >.rate↵
MatrixRow (
    S s )
```

5.16.2.5 uniformisedMatrixRow()

```
Map<S, Double> quasylib.sibilla.core.markov.ContinuousTimeMarkovChain< S >.uniformised↵
MatrixRow (
    S s )
```

5.17 quasylab.sibilla.core.network.serialization.CustomClassLoader Class Reference

Inheritance diagram for quasylab.sibilla.core.network.serialization.CustomClassLoader:

Static Public Member Functions

- static byte[] [loadClassBytes](#) (String className)
- static byte[] [removeClassBytes](#) (String className)
- static void [defClass](#) (String name, byte[] b)

5.17.1 Detailed Description

Utility class used to load the data associated to a .class file into the memory.

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.17.2 Member Function Documentation

5.17.2.1 defClass()

```

static void quasylab.sibilla.core.network.serialization.CustomClassLoader.defClass (
    String name,
    byte[] b ) [static]
  
```

Loads into memory the data associated to a .class file

Parameters

<i>name</i>	of the class to be loaded in memory.
<i>b</i>	byte array containing the data of the class to be loaded in memory.

5.17.2.2 loadClassBytes()

```
static byte [] quasylab.sibilla.core.network.serialization.CustomClassLoader.loadClassBytes (
    String className ) [static]
```

Retrieves the byte array associated to a class name that was previously loaded through this loader.

Parameters

<i>className</i>	the name of the class which byte array data needs to be retrieved.
------------------	--

Returns

byte array associated with the requested class name.

5.17.2.3 removeClassBytes()

```
static byte [] quasylab.sibilla.core.network.serialization.CustomClassLoader.removeClassBytes
(
    String className ) [static]
```

Deletes the byte array associated to a class name that was previously loaded through this loader.

Parameters

<i>className</i>	the name of the class which byte array data needs to be deleted.
------------------	--

Returns

byte array associated with the requested class name or null if the class wasn't loaded using this loader.

5.18 quasylab.sibilla.core.simulator.DefaultRandomGenerator Class Reference

Inheritance diagram for quasylab.sibilla.core.simulator.DefaultRandomGenerator:

Public Member Functions

- void [setSeed](#) (long seed)
- double [nextDouble](#) ()

5.18.1 Detailed Description

Default random generator.

5.18.2 Member Function Documentation

5.18.2.1 nextDouble()

```
double quasylib.sibilla.core.simulator.DefaultRandomGenerator.nextDouble ( )
```

5.18.2.2 setSeed()

```
void quasylib.sibilla.core.simulator.DefaultRandomGenerator.setSeed (
    long seed )
```

5.19 quasylib.sibilla.core.network.slave.DiscoverableBasicSimulationServer Class Reference

Inheritance diagram for quasylib.sibilla.core.network.slave.DiscoverableBasicSimulationServer:

Public Member Functions

- [DiscoverableBasicSimulationServer](#) (int localDiscoveryPort, [TCPNetworkManagerType](#) simulationNetworkManager, [UDPNetworkManagerType](#) discoveryNetworkManager)

Additional Inherited Members

5.19.1 Detailed Description

Extensions of a simple server that executes the simulations passed by a master server. It replies to discovery messages sent from master servers.

Author

Stelluti Francesco Pio
Zamponi Marco

5.19.2 Constructor & Destructor Documentation

5.19.2.1 DiscoverableBasicSimulationServer()

```
quasylab.sibilla.core.network.slave.DiscoverableBasicSimulationServer.DiscoverableBasic←
SimulationServer (
    int localDiscoveryPort,
    TCPNetworkManagerType simulationNetworkManager,
    UDPNetworkManagerType discoveryNetworkManager )
```

5.20 quasylab.sibilla.core.markov.DiscreteTimeMarkovChain< S > Class Template Reference

Inheritance diagram for quasylab.sibilla.core.markov.DiscreteTimeMarkovChain< S >:

Public Member Functions

- void [add](#) (S s, Map< S, Double > row)
- Map< S, Double > [probabilityMatrixRow](#) (S s)

Additional Inherited Members

5.20.1 Detailed Description

Author

loreti

5.20.2 Member Function Documentation

5.20.2.1 add()

```
void quasylab.sibilla.core.markov.DiscreteTimeMarkovChain< S >.add (
    S s,
    Map< S, Double > row )
```

Reimplemented from [quasylab.sibilla.core.markov.MarkovChain< S >](#).

5.20.2.2 `probabilityMatrixRow()`

```
Map<S, Double> quasilab.sibilla.core.markov.DiscreteTimeMarkovChain< S >.probabilityMatrixRow
(
    S s )
```

Reimplemented from `quasilab.sibilla.core.markov.MarkovChain< S >`.

5.21 `quasilab.sibilla.core.ExecutionEnvironment< S extends State >` Class Template Reference

Public Member Functions

- `ExecutionEnvironment` (RandomGenerator rg, `Model< S >` model, S init)
- S `currentState` ()
- boolean `step` ()
- boolean `step` (Predicate< S > condition)
- boolean `previous` ()
- boolean `restart` ()
- double `currentTime` ()
- int `steps` ()

5.21.1 Detailed Description

An execution environment has the responsibility to interactively execute a given model.

5.21.2 Constructor & Destructor Documentation

5.21.2.1 `ExecutionEnvironment()`

```
quasilab.sibilla.core.ExecutionEnvironment< S extends State >.ExecutionEnvironment (
    RandomGenerator rg,
    Model< S > model,
    S init )
```

Create a new `ExecutionEnvironment` that can be used to execute a given model starting from a specific state.

Parameters

<i>model</i>	model to execute.
<i>init</i>	

5.21.3 Member Function Documentation

5.21.3.1 currentState()

```
S quasilab.sibilla.core.ExecutionEnvironment< S extends State >.currentState ( )
```

Returns current state in the running.

Returns

current state in simulation run.

5.21.3.2 currentTime()

```
double quasilab.sibilla.core.ExecutionEnvironment< S extends State >.currentTime ( )
```

Returns current simulation time.

Returns

current simulation time.

5.21.3.3 previous()

```
boolean quasilab.sibilla.core.ExecutionEnvironment< S extends State >.previous ( )
```

Cancel the last step.

Returns

true if there is a previous state, false otherwise.

5.21.3.4 restart()

```
boolean quasilab.sibilla.core.ExecutionEnvironment< S extends State >.restart ( )
```

Restarts the session.

Returns

true if the session can be restarted, false otherwise.

5.21.3.5 step() [1/2]

```
boolean quasylib.sibilla.core.ExecutionEnvironment< S extends State >.step ( )
```

Performs a step in the run.

Returns

false if current state is a deadlock state, true otherwise.

5.21.3.6 step() [2/2]

```
boolean quasylib.sibilla.core.ExecutionEnvironment< S extends State >.step (
    Predicate< S > condition )
```

Executes the simulation run until a give predicate on the current state is satisfied or a deadlock state is reached.

Parameters

<i>condition</i>	stopping predicate.
------------------	---------------------

Returns

false if current state is a deadlock state, true otherwise.

5.21.3.7 steps()

```
int quasylib.sibilla.core.ExecutionEnvironment< S extends State >.steps ( )
```

Returns the number of steps.

Returns

the number of steps.

- static [FoxGlynn compute](#) (double lambda, double error)

5.24.1 Detailed Description

Based on <https://github.com/oris-tool/sirio/blob/master/sirio/src/main/java/org/oristool/FoxGlynn.java>

5.24.2 Member Function Documentation

5.24.2.1 compute()

```
static FoxGlynn quasylab.sibilla.core.markov.FoxGlynn.compute (
    double lambda,
    double error ) [static]
```

Computes the Fox-Glynn approximation of Poisson probabilities.

Parameters

<i>lambda</i>	rate of the Poisson distribution
<i>error</i>	the maximum allowed value of probabilities not included

Returns

truncation points and weights/probabilities between them

Exceptions

<i>IllegalStateException</i>	if underflow can occur or the tails cannot be bounded
------------------------------	---

5.24.2.2 computeReduced()

```
static FoxGlynn quasylib.sibilla.core.markov.FoxGlynn.computeReduced (  
    double lambda,  
    double error ) [static]
```

Computes a reduced Fox-Glynn approximation of Poisson probabilities.

After bounding tails and computing Poisson probabilities with Fox-Glynn algorithm, a simple heuristic is applied to reduce the size of the distribution (under the target error).

Parameters

<i>lambda</i>	rate of the Poisson distribution
<i>error</i>	the maximum allowed value of probabilities not included

Returns

truncation points and weights/probabilities between them

Exceptions

<i>IllegalStateException</i>	if underflow can occur or the tails cannot be bounded
------------------------------	---

5.24.2.3 leftPoint()

```
int quasylib.sibilla.core.markov.FoxGlynn.leftPoint ( )
```

Returns the point used to truncate the left tail of the Poisson distribution.

Returns

first point of the Poisson distribution approximation

5.24.2.4 poissonProb()

```
double quasylab.sibilla.core.markov.FoxGlynn.poissonProb (
    int i )
```

Returns the Poisson probability for a point in the approximation.

The input index must belong to the range

```
[leftPoint(), rightPoint()]
```

.

Parameters

<i>i</i>	time point
----------	------------

Returns

Poisson probability for the given point

Exceptions

<i>IndexOutOfBoundsException</i>	unless <code>leftPoint() <= i <= rightPoint()</code>
----------------------------------	---

5.24.2.5 rightPoint()

```
int quasylab.sibilla.core.markov.FoxGlynn.rightPoint ( )
```

Returns the point used to truncate the right tail of the Poisson distribution.

Returns

last point of the Poisson distribution approximation

5.24.2.6 totalWeight()

```
double quasylab.sibilla.core.markov.FoxGlynn.totalWeight ( )
```

Returns a normalization constant for the Poisson approximation.

Returns

normalization constant

5.24.2.7 weight()

```
double quasylab.sibilla.core.markov.FoxGlynn.weight (
    int i )
```

Returns the weight of a point in the approximation.

The input index must belong to the range

```
[leftPoint(), rightPoint()]
```

.

Parameters

<i>i</i>	time point
----------	------------

Returns

weight for the given point

Exceptions

<i>IndexOutOfBoundsException</i>	unless <code>leftPoint() <= i <= rightPoint()</code>
----------------------------------	---

- default List< [Action](#)< S > > [actions](#) (RandomGenerator r, double time, S state)

Static Public Member Functions

- static double [sampleExponentialDistribution](#) (double rate, RandomGenerator r)

5.31.1 Detailed Description

This is a model implementing a Markov process.

5.31.2 Member Function Documentation

5.31.2.1 actions()

```
default List<Action<S> > quasylib.sibilla.core.models.MarkovProcess< S extends State >.actions
(
    RandomGenerator r,
    double time,
    S state )
```

5.31.2.2 getTransitions()

```
WeightedStructure<StepFunction<S> > quasylib.sibilla.core.models.MarkovProcess< S extends
State >.getTransitions (
    RandomGenerator r,
    double time,
    S s )
```

Returns the transitions enabled in a given state at a given time. Each transition is represented via a [StepFunction](#), and all the enabled transitions are stored in a [WeightedStructure](#) that associates each function with its rate.

Parameters

<i>r</i>	random generator used to sample needed random variables.
<i>time</i>	current time.
<i>s</i>	current state.

Returns

the weighted structure with all the enabled transitions.

5.31.2.3 next()

```
default TimeStep<S> quasylib.sibilla.core.models.MarkovProcess< S extends State >.next (
    RandomGenerator r,
    double time,
    S state )
```

5.31.2.4 sampleExponentialDistribution()

```
static double quasylib.sibilla.core.models.MarkovProcess< S extends State >.sampleExponential↵
Distribution (
    double rate,
    RandomGenerator r ) [static]
```

Sample a random value of a random variable exponentially distributed with parameter *rate*.

Parameters

<i>rate</i>	a positive value representing the parameter of an exponentially distributed random variable.
<i>r</i>	a random generator.

Returns

a random value sampled from an exponentially distributed random variable with parameter *rate*.

- [PONG](#)
- [INIT_RESPONSE](#)
- [DATA_RESPONSE](#)
- [CLOSE_CONNECTION](#)

5.32.1 Detailed Description

All the possible command and signals that can be sent from a master server.

Author

Stelluti Francesco Pio
Zamponi Marco

5.32.2 Member Data Documentation

5.32.2.1 CLOSE_CONNECTION

```
quasylab.sibilla.core.network.master.MasterCommand.CLOSE_CONNECTION
```

The command sent by a master server to inform that the connection with an host will be closed.

5.32.2.2 DATA_RESPONSE

```
quasylab.sibilla.core.network.master.MasterCommand.DATA_RESPONSE
```

The command sent by a master server that has received a DATA command from a client.

5.32.2.3 INIT

`quasylab.sibilla.core.network.master.MasterCommand.INIT`

The command sent by a master server to initiate a new connection over the network.

5.32.2.4 INIT_RESPONSE

`quasylab.sibilla.core.network.master.MasterCommand.INIT_RESPONSE`

The command sent by a master server that has received an INIT command from a client.

5.32.2.5 PING

`quasylab.sibilla.core.network.master.MasterCommand.PING`

The command sent by a master server to ping an host which has a connection open with.

5.32.2.6 PONG

`quasylab.sibilla.core.network.master.MasterCommand.PONG`

The command sent by a master server to reply to a ping request received by an host.

5.32.2.7 RESULTS

`quasylab.sibilla.core.network.master.MasterCommand.RESULTS`

The command sent by a master server to inform that a batch of simulations' results will be sent over the network connection.

5.32.2.8 TASK

`quasylab.sibilla.core.network.master.MasterCommand.TASK`

The command sent by a master server to inform that a batch of tasks will be sent over the network connection.

5.33 quasylab.sibilla.core.network.master.MasterServerSimulationEnvironment↔ Environment Class Reference

Inheritance diagram for `quasylab.sibilla.core.network.master.MasterServerSimulationEnvironment`:

Public Member Functions

- [MasterServerSimulationEnvironment](#) (int localDiscoveryPort, int remoteDiscoveryPort, [UDPNetworkManagerType](#) discoveryNetworkManager, int localSimulationPort, [TCPNetworkManagerType](#) simulationNetworkManager, [PropertyChangeListener](#)... listeners)
- void [propertyChange](#) ([PropertyChangeEvent](#) evt)

5.33.1 Detailed Description

Manages connection with clients and slave servers to execute and manage the simulations' tasks and their results over network connections.

Author

Stelluti Francesco Pio

Zamponi Marco

5.33.2 Constructor & Destructor Documentation

5.33.2.1 MasterServerSimulationEnvironment()

```
quasylab.sibilla.core.network.master.MasterServerSimulationEnvironment.MasterServerSimulationEnvironment (
    int localDiscoveryPort,
    int remoteDiscoveryPort,
    UDPNetworkManagerType discoveryNetworkManager,
    int localSimulationPort,
    TCPNetworkManagerType simulationNetworkManager,
    PropertyChangeListener... listeners )
```

Creates and starts up a master server with the given parameters.

Parameters

<i>localDiscoveryPort</i>	port used by the master server to manage the incoming slave servers' registration requests.
<i>remoteDiscoveryPort</i>	port used by the slave servers to manage the incoming master server discovery message.
<i>discoveryNetworkManager</i>	quasylab.sibilla.core.network.communication.UDPNetworkManagerType of UDP network communication that will be used during the slave servers' discovery by the master.
<i>localSimulationPort</i>	port used by the master server to manage the incoming clients' simulation requests.
<i>simulationNetworkManager</i>	quasylab.sibilla.core.network.communication.TCPNetworkManagerType of TCP network communication that will be used between master server and clients.
<i>listeners</i>	java.beans.PropertyChangeListener instances that will be updated about the state of this master server.

5.33.3 Member Function Documentation

5.33.3.1 propertyChange()

```
void quasylab.sibilla.core.network.master.MasterServerSimulationEnvironment.propertyChange (
    PropertyChangeEvent evt )
```

5.34 quasylab.sibilla.core.network.master.MasterState Class Reference

Inheritance diagram for quasylab.sibilla.core.network.master.MasterState:

Public Member Functions

- [MasterState](#) ([NetworkInfo](#) masterNetworkInfo)

- synchronized Date [getMasterServerStartDate](#) ()
- [MasterState](#) [clone](#) ()
- boolean [equals](#) (Object o)
- int [hashCode](#) ()
- int [compareTo](#) ([MasterState](#) masterState)

5.34.1 Detailed Description

Wraps the state of a master server. Its updates can be listened by `java.beans.PropertyChangeListener` instances.

Author

Stelluti Francesco Pio
Zamponi Marco

5.34.2 Constructor & Destructor Documentation

5.34.2.1 MasterState()

```
quasylib.sibilla.core.network.master.MasterState.MasterState (
    NetworkInfo masterNetworkInfo )
```

Initializes the state.

Parameters

<i>masterNetworkInfo</i>	The network related informations about this master server.
--------------------------	--

5.34.3 Member Function Documentation

5.34.3.1 addPropertyChangeListener()

```
synchronized void quasylib.sibilla.core.network.master.MasterState.addPropertyChangeListener (
    String property,
    PropertyChangeListener pcl )
```

5.34.3.2 addSimulation()

```
synchronized void quasylib.sibilla.core.network.master.MasterState.addSimulation (
    SimulationState simulationState )
```

Registers a client submitted simulation.

Parameters

<i>simulationState</i>	state associated with the simulation.
------------------------	---------------------------------------

5.34.3.3 addSlaveServer()

```
synchronized boolean quasylib.sibilla.core.network.master.MasterState.addSlaveServer (
    NetworkInfo slaveNetworkInfo )
```

Registers a new slave server.

Parameters

<i>slaveNetworkInfo</i>	related to the to be registered slave server.
-------------------------	---

Returns

java.lang.Boolean that indicates the result of the operation.

5.34.3.4 clone()

```
MasterState quasylib.sibilla.core.network.master.MasterState.clone ( )
```

5.34.3.5 compareTo()

```
int quasylib.sibilla.core.network.master.MasterState.compareTo (
    MasterState masterState )
```

Compares two master states for ordering.

Parameters

<i>masterState</i>	the quasylib.sibilla.core.network.master.MasterState to be compared.
--------------------	--

Returns

the result of the compareTo method called on the masterServerStartDate instance.

5.34.3.6 equals()

```
boolean quasylib.sibilla.core.network.master.MasterState.equals (
    Object o )
```

5.34.3.7 getConnectedSlaveServers()

```
synchronized int quasylib.sibilla.core.network.master.MasterState.getConnectedSlaveServers ( )
```

Returns

the number of slave servers currently registered.

5.34.3.8 getExecutedSimulations()

```
synchronized int quasylib.sibilla.core.network.master.MasterState.getExecutedSimulations ( )
```

Returns

The number of client submitted simulations that have been executed since the startup of the master server.

5.34.3.9 getMasterNetworkInfo()

```
synchronized NetworkInfo quasylib.sibilla.core.network.master.MasterState.getMasterNetworkInfo  
( )
```

Returns

the network related informations about this master server.

5.34.3.10 getMasterServerStartDate()

```
synchronized Date quasylib.sibilla.core.network.master.MasterState.getMasterServerStartDate ( )
```

Returns

The date the master server started its execution.

5.34.3.11 getSimulationStates()

```
synchronized Set<SimulationState> quasylib.sibilla.core.network.master.MasterState.getSimulation↔  
States ( )
```

Returns

java.util.Set related to submitted simulation states.

5.34.3.12 getSlaveServersNetworkInfos()

```
synchronized Set<NetworkInfo> quasylib.sibilla.core.network.master.MasterState.getSlaveServersNetworkInfos ( )
```

Returns

java.util.Set related to registered slave servers.

5.34.3.13 hashCode()

```
int quasylib.sibilla.core.network.master.MasterState.hashCode ( )
```

5.34.3.14 increaseExecutedSimulations()

```
synchronized void quasylib.sibilla.core.network.master.MasterState.increaseExecutedSimulations ( )
```

Increases the number of client submitted simulations that have been executed since the startup of the master server.

5.34.3.15 propertyChange()

```
void quasylib.sibilla.core.network.master.MasterState.propertyChange (
    PropertyChangeEvent evt )
```

5.34.3.16 removeSimulation()

```
synchronized boolean quasylib.sibilla.core.network.master.MasterState.removeSimulation (
    SimulationState simulationState )
```

Removes a [quasylib.sibilla.core.network.master.SimulationState](#).

Parameters

<i>simulationState</i>	the state to be removed.
------------------------	--------------------------

Returns

java.lang.Boolean that indicates the result of the operation.

5.34.3.17 removeSlaveServer()

```
synchronized boolean quasylab.sibilla.core.network.master.MasterState.removeSlaveServer (
    NetworkInfo slaveNetworkInfo )
```

Unregisters a slave server.

Parameters

<i>slaveNetworkInfo</i>	related to the to be unregistered slave server.
-------------------------	---

Returns

java.lang.Boolean that indicates the result of the operation.

5.35 quasylab.sibilla.core.simulator.sampling.Measure< S extends State > Interface Template Reference

Inheritance diagram for quasylab.sibilla.core.simulator.sampling.Measure< S extends State >:

Public Member Functions

- double [measure](#) (S t)
- String [getName](#) ()

5.35.1 Detailed Description

Author

loreti

5.35.2 Member Function Documentation

5.35.2.1 getName()

```
String quasylab.sibilla.core.simulator.sampling.Measure< S extends State >.getName ( )
```

5.35.2.2 measure()

```
double quasylib.sibilla.core.simulator.sampling.Measure< S extends State >.measure (
    S t )
```

5.36 quasylib.sibilla.core.models.MeasureFunction< S extends State > Interface Template Reference

Inheritance diagram for quasylib.sibilla.core.models.MeasureFunction< S extends State >:

Public Member Functions

- double [apply](#) (S state)

5.36.1 Detailed Description

A measure is a function associating each state with a real value.

Parameters

<S>	data type of states.
-----	----------------------

5.36.2 Member Function Documentation

5.36.2.1 apply()

```
double quasylib.sibilla.core.models.MeasureFunction< S extends State >.apply (
    S state )
```

Returns a double value associated with a state.

Parameters

<i>state</i>	a state
--------------	---------

Returns

the double value associated with the parameters.

5.37 quasylib.sibilla.core.models.Model< S extends State > Interface Template Reference

Public Member Functions

- [TimeStep](#)< S > [next](#) (RandomGenerator r, double time, S state)
- List< [Action](#)< S > > [actions](#) (RandomGenerator r, double time, S state)
- [ModelDefinition](#)< S > [getModelDefinition](#) ()

5.37.1 Detailed Description

Represents a *Stochastic Process*.

Parameters

<S>	data type for the state of the process.
-----	---

5.37.2 Member Function Documentation

5.37.2.1 actions()

```
List<Action<S> > quasylib.sibilla.core.models.Model< S extends State >.actions (
    RandomGenerator r,
    double time,
    S state )
```

Returns the list of actions that are enabled when the process a a given time is in a given state.

Parameters

<i>r</i>	random generator used to sample needed random values.
<i>time</i>	current time.
<i>state</i>	current state.

Returns

list of enabled actions.

5.37.2.2 getModelDefinition()

```
ModelDefinition<S> quasylib.sibilla.core.models.Model< S extends State >.getModelDefinition (
)
```

5.37.2.3 next()

```
TimeStep<S> quasylib.sibilla.core.models.Model< S extends State >.next (
    RandomGenerator r,
    double time,
    S state )
```

Samples possible next state when the process is in a given state at a given time. A random generator is passed to sample random values when needed.

Parameters

<i>r</i>	random generator used to sample needed random values.
<i>time</i>	current time.
<i>state</i>	current state.

Returns

process time step.

5.38 quasylib.sibilla.core.simulator.util.ModelCompiler Class Reference

5.38.1 Detailed Description

Author

loreti

5.39 quasylib.sibilla.core.models.ModelDefinition< S extends State > Interface Template Reference

Inheritance diagram for quasylib.sibilla.core.models.ModelDefinition< S extends State >:

Public Member Functions

- int [stateArity](#) ()
- int [modelArity](#) ()
- S [state](#) (double ... parameters)
- [Model](#)< S > [createModel](#) (double ... args)

5.39.1 Detailed Description

This interface implements a factory that can be used to build a model that according to some parameters.

Parameters

<S>	
-----	--

5.39.2 Member Function Documentation

5.39.2.1 createModel()

```
Model<S> quasylib.sibilla.core.models.ModelDefinition< S extends State >.createModel (
    double ... args )
```

Creates a new [Model](#) from a given set of parameters.

Parameters

<i>args</i>	model arguments
-------------	-----------------

Returns

a model built from a given set of parameters.

5.39.2.2 modelArity()

```
int quasylib.sibilla.core.models.ModelDefinition< S extends State >.modelArity ( )
```

Returns the number of parameters needed to build a model.

Returns

the number of parameters needed to build a model.

5.39.2.3 state()

```
S quasylib.sibilla.core.models.ModelDefinition< S extends State >.state (
    double ... parameters )
```

Create the default state (that is the first one defined in the factory) with the given parameters.

Parameters

<i>parameters</i>	parameters to use in state creation.
-------------------	--------------------------------------

Returns

the default state associated the given parameters.

5.39.2.4 stateArity()

```
int quasylib.sibilla.core.models.ModelDefinition< S extends State >.stateArity ( )
```

Returns the number of parameters needed to build a state.

Returns

the number of parameters needed to build a state.

5.40 quasylib.sibilla.core.simulator.util.ModelPublisher Class Reference

Public Member Functions

- [ModelPublisher](#) (String outputDirectory) throws MalformedURLException
- boolean [buildClass](#) (File ... files)

5.40.1 Detailed Description

Author

loreti

5.40.2 Constructor & Destructor Documentation

5.40.2.1 ModelPublisher()

```
quasylib.sibilla.core.simulator.util.ModelPublisher.ModelPublisher (
    String outputDirectory ) throws MalformedURLException
```

5.40.3 Member Function Documentation

5.40.3.1 buildClass()

```
boolean quasylib.sibilla.core.simulator.util.ModelPublisher.buildClass (
    File ... files )
```

5.41 quasylib.sibilla.core.network.NetworkInfo Class Reference

Inheritance diagram for quasylib.sibilla.core.network.NetworkInfo:

Public Member Functions

- [NetworkInfo](#) (InetAddress address, int port, [NetworkManagerType](#) serType)
- InetAddress [getAddress](#) ()
- int [getPort](#) ()
- [NetworkManagerType](#) [getType](#) ()
- String [toString](#) ()
- int [hashCode](#) ()
- boolean [equals](#) (Object obj)
- [NetworkInfo](#) [clone](#) ()

5.41.1 Detailed Description

Class that stores info about the connection with a server

Author

Stelluti Francesco Pio
Zamponi Marco

5.41.2 Constructor & Destructor Documentation

5.41.2.1 NetworkInfo()

```
quasylib.sibilla.core.network.NetworkInfo.NetworkInfo (
    InetAddress address,
    int port,
    NetworkManagerType serType )
```

Creates a new [NetworkInfo](#) object with the parameters given in input

Parameters

<i>address</i>	address of the server
<i>port</i>	port the server listens to
<i>serType</i>	type of the network manager used by the server

5.41.3 Member Function Documentation

5.41.3.1 clone()

```
NetworkInfo quasylib.sibilla.core.network.NetworkInfo.clone ( )
```

5.41.3.2 equals()

```
boolean quasylib.sibilla.core.network.NetworkInfo.equals (
    Object obj )
```

5.41.3.3 getAddress()

```
InetAddress quasylib.sibilla.core.network.NetworkInfo.getAddress ( )
```

Returns the address of the server

Returns

address of the server

5.41.3.4 getPort()

```
int quasylib.sibilla.core.network.NetworkInfo.getPort ( )
```

Returns the port the server listens to

Returns

port the server listens to

5.41.3.5 getType()

```
NetworkManagerType quasylab.sibilla.core.network.NetworkInfo.getType ( )
```

Returns the type of network manager used by the server.

Returns

type of network manager used by the server.

5.41.3.6 hashCode()

```
int quasylab.sibilla.core.network.NetworkInfo.hashCode ( )
```

5.41.3.7 toString()

```
String quasylab.sibilla.core.network.NetworkInfo.toString ( )
```

5.42 quasylab.sibilla.core.network.communication.NetworkManagerType Interface Reference ↩

Inheritance diagram for quasylab.sibilla.core.network.communication.NetworkManagerType:

5.42.1 Detailed Description

Interface that needs to be implemented by all of the enum classes related to communication oriented classes that are based upon TCP/IP transport layer protocols.

Author

Belenchia Matteo
Stelluti Francesco Pio
Zamponi Marco

5.43 `quasylab.sibilla.core.network.master.NetworkSimulationManager< S extends State >` Class Template Reference

Inheritance diagram for `quasylab.sibilla.core.network.master.NetworkSimulationManager< S extends State >`:

Public Member Functions

- `NetworkSimulationManager` (RandomGenerator random, Consumer< [Trajectory](#)< S >> consumer, [SimulationMonitor](#) monitor, [ModelDefinition](#)< S > modelDefinition, [SimulationState](#) simulationState)
- synchronized void `join` () throws InterruptedException

Static Public Member Functions

- static [SimulationManagerFactory](#) `getNetworkSimulationManagerFactory` ([SimulationState](#) simulationState)

Protected Member Functions

- void `startTasksHandling` ()

5.43.1 Detailed Description

Handles and coordinates a simulation between the slave servers

Parameters

<S>	The quasylab.sibilla.core.past.State of the simulation model.
-----	---

Author

Belenchia Matteo

Stelluti Francesco Pio

Zamponi Marco

5.43.2 Constructor & Destructor Documentation

5.43.2.1 NetworkSimulationManager()

```
quasylib.sibilla.core.network.master.NetworkSimulationManager< S extends State >.NetworkSimulationManager  
(  
    RandomGenerator random,  
    Consumer< Trajectory< S >> consumer,  
    SimulationMonitor monitor,  
    ModelDefinition< S > modelDefinition,  
    SimulationState simulationState )
```

Creates a [NetworkSimulationManager](#) with the parameters given in input

Parameters

<i>random</i>	RandomGenerator used in the simulation
<i>consumer</i>	
<i>monitor</i>	TODO
<i>modelDefinition</i>	model definition that represent the Model used in the simulation
<i>simulationState</i>	state of the simulation that is being executed

5.43.3 Member Function Documentation

5.43.3.1 getNetworkSimulationManagerFactory()

```
static SimulationManagerFactory quasylib.sibilla.core.network.master.NetworkSimulationManager<  
S extends State >.getNetworkSimulationManagerFactory (  
    SimulationState simulationState ) [static]
```

5.43.3.2 join()

```
synchronized void quasylib.sibilla.core.network.master.NetworkSimulationManager< S extends  
State >.join ( ) throws InterruptedException
```

5.43.3.3 startTasksHandling()

```
void quasylib.sibilla.core.network.master.NetworkSimulationManager< S extends State >.start←  
TasksHandling ( ) [protected]
```

5.44 `quasylab.sibilla.core.network.NetworkTask< S extends State >` Class Template Reference

Inheritance diagram for `quasylab.sibilla.core.network.NetworkTask< S extends State >`:

Public Member Functions

- `NetworkTask` (`List< SimulationTask< S >> tasks`)
- `List< SimulationTask< S >> getTasks` ()

5.44.1 Detailed Description

Class that stores a list of tasks sent through network.

Parameters

<code>< S ></code>	The quasylab.sibilla.core.past.State of the simulation model.
--------------------------	---

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.44.2 Constructor & Destructor Documentation

5.44.2.1 `NetworkTask()`

```

quasylab.sibilla.core.network.NetworkTask< S extends State >.NetworkTask (
    List< SimulationTask< S >> tasks )
  
```

Creates a `NetworkTask` object from a list of tasks

Parameters

<code>tasks</code>	list of tasks to be executed by a slave server
--------------------	--

5.44.3 Member Function Documentation

5.44.3.1 getTasks()

```
List<SimulationTask<S> > quasylab.sibilla.core.network.NetworkTask< S extends State >.getTasks ( )
```

Returns the list of tasks to be executed by a slave server

Returns

list of tasks to be executed by a slave server

5.45 quasylab.sibilla.core.network.util.NetworkUtils Class Reference

Static Public Member Functions

- static InetAddress [getLocalAddress](#) () throws SocketException
- static List< InetAddress > [getBroadcastAddresses](#) () throws SocketException

5.45.1 Detailed Description

Utility class used to manage and find the local ip of the host and its interfaces in an easy way

Author

Stelluti Francesco Pio
Zamponi Marco

5.45.2 Member Function Documentation

5.45.2.1 getBroadcastAddresses()

```
static List<InetAddress> quasylab.sibilla.core.network.util.NetworkUtils.getBroadcastAddresses  
( ) throws SocketException [static]
```

Returns a list of the broadcast addresses linked to each network interface on the host.

Returns

list of broadcast addresses linked to the network interfaces of the host

Exceptions

<i>SocketException</i>	if the host has no network interfaces configured or if an I/O exception happens
------------------------	---

5.45.2.2 getLocalAddress()

```
static InetAddress quasylib.sibilla.core.network.util.NetworkUtils.getLocalAddress ( ) throws
SocketException [static]
```

Returns the local IPV4 address of the machine.

Returns

local IPV4 address of the machine.

Exceptions

<i>SocketException</i>	if the host has no network interfaces configured or if an I/O exception happens
------------------------	---

5.46 quasylib.sibilla.core.past.ds.TupleSpace.Node Class Reference**Public Member Functions**

- [PopulationModelDefinition](#) [getModelDefinition](#) ()

Static Public Member Functions

- static Map< String, Integer > [createPopulation](#) (String ... species)
- static [PopulationState](#) [vectorOf](#) (int ... species)

5.49.1 Detailed Description

This class implements a population model. This class is parametrised with respect to types S and T . The former is the data type used to identify population species in the population vector. Parameter T identifies environment

loreti

5.49.2 Constructor & Destructor Documentation

5.49.2.1 PopulationModel() [1/2]

```
quasylib.sibilla.core.models.pm.PopulationModel.PopulationModel ( )
```

5.49.2.2 PopulationModel() [2/2]

```
quasylib.sibilla.core.models.pm.PopulationModel.PopulationModel (
    PopulationModelDefinition modelDefinition )
```

5.49.3 Member Function Documentation

5.49.3.1 addRule()

```
void quasylib.sibilla.core.models.pm.PopulationModel.addRule (
    PopulationRule rule )
```

5.49.3.2 addRules()

```
void quasylib.sibilla.core.models.pm.PopulationModel.addRules (
    Collection< PopulationRule > rules )
```

5.49.3.3 createPopulation()

```
static Map<String,Integer> quasylib.sibilla.core.models.pm.PopulationModel.createPopulation (
    String ... species ) [static]
```

5.49.3.4 getModelDefinition()

```
PopulationModelDefinition quasylib.sibilla.core.models.pm.PopulationModel.getModelDefinition (
)
```

5.49.3.5 getTransitions()

```
WeightedStructure<StepFunction<PopulationState> > quasylib.sibilla.core.models.pm.PopulationModel.getTransitions (
    RandomGenerator r,
    double now,
    PopulationState state )
```

5.49.3.6 vectorOf()

```
static PopulationState quasylib.sibilla.core.models.pm.PopulationModel.vectorOf (
    int ... species ) [static]
```

int quasylib.sibilla.core.models.pm.util.PopulationRegistry.size ( )
```

5.52 quasylib.sibilla.core.models.pm.PopulationRule Interface Reference

Inheritance diagram for quasylib.sibilla.core.models.pm.PopulationRule:

Public Member Functions

- [PopulationTransition apply](#) (RandomGenerator *r*, double *now*, [PopulationState](#) *state*)

5.52.1 Detailed Description

Author

loreti

5.52.2 Member Function Documentation

5.52.2.1 apply()

```

PopulationTransition quasylib.sibilla.core.models.pm.PopulationRule.apply (
    RandomGenerator r,
    double now,
    PopulationState state )
  
```

Parameters

<i>r</i>	
<i>state</i>	

Returns

null if the rule cannot be applied.

Implemented in [quasylib.sibilla.core.models.pm.UnicastRule](#), [quasylib.sibilla.core.models.pm.ReactionRule](#), and [quasylib.sibilla.core.models.pm.BroadcastRule](#).

- synchronized List< [SimulationTask](#)< S > > [getTask](#) (int n, boolean blocking) throws InterruptedException
- synchronized boolean [hasTasks](#) ()
- int [getRunningTasks](#) ()

5.55.1 Detailed Description

A [SimulationManager](#) has the responsibility to coordinate simulation activities.

Author

Matteo Belenchia, Michele Loreti

5.55.2 Constructor & Destructor Documentation

5.55.2.1 QueuedSimulationManager()

```
quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State >.QueuedSimulationManager  
(  
    RandomGenerator random,  
    SimulationMonitor monitor,  
    Consumer< Trajectory< S >> trajectoryConsumer )
```

5.55.3 Member Function Documentation

5.55.3.1 getRunningTasks()

```
int quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State >.getRunningTasks  
( ) [protected]
```

5.55.3.2 getTask() [1/2]

```
synchronized List<SimulationTask<S> > quasylib.sibilla.core.simulator.QueuedSimulationManager<  
S extends State >.getTask (  
    int n ) [protected]
```

Gets the next n tasks to execute

Parameters

<i>n</i>	number of tasks to be returned
----------	--------------------------------

Returns

list of the requested tasks

5.55.3.3 `getTask()` [2/2]

```
synchronized List<SimulationTask<S> > quasylib.sibilla.core.simulator.QueuedSimulationManager<
S extends State >.getTask (
    int n,
    boolean blocking ) throws InterruptedException [protected]
```

- Gets the next n tasks to execute

Parameters

<i>n</i>	number of tasks to be returned
<i>blocking</i>	whether the operation is blocking or not

Returns

list of the requested tasks

Exceptions

<i>InterruptedException</i>	
-----------------------------	--

5.55.3.4 `handleTask()`

```
synchronized void quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State
>.handleTask (
    SimulationTask< S > simulationTask ) [protected]
```

Add a simulationTask to the tasks to be executed

Parameters

<i>simulationTask</i>	tasks to be added
-----------------------	-------------------

5.55.3.5 `hasTasks()`

```
synchronized boolean quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State
>.hasTasks ( ) [protected]
```

5.55.3.6 nextTask() [1/2]

```
synchronized SimulationTask<S> quasylib.sibilla.core.simulator.QueuedSimulationManager< S  
extends State >.nextTask ( ) [protected]
```

5.55.3.7 nextTask() [2/2]

```
synchronized SimulationTask<S> quasylib.sibilla.core.simulator.QueuedSimulationManager< S  
extends State >.nextTask (   
    boolean blocking ) throws InterruptedException [protected]
```

Gets the next task to be executed

Parameters

<i>blocking</i>	whether the operation is blocking or not
-----------------	--

Returns

next task to be executed

Exceptions

<i>InterruptedException</i>	
-----------------------------	--

5.55.3.8 pendingTasks()

```
synchronized int quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State  
>.pendingTasks ( )
```

5.55.3.9 rescheduleAll()

```
synchronized void quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State  
>.rescheduleAll (   
    Collection<? extends SimulationTask< S >> tasks ) [protected]
```

Reschedules all the tasks given in input

Parameters

<i>tasks</i>	tasks to reschedule
--------------	---------------------

5.55.3.10 startTasksHandling()

```
abstract void quasylib.sibilla.core.simulator.QueuedSimulationManager< S extends State >.startTasksHandling ( ) [abstract], [protected]
```

Starts the handling of the tasks to be executed to complete the simulation

5.69 quasylab.sibilla.core.network.serialization.Serializer Class Reference

Static Public Member Functions

- static byte[] [serialize](#) (Serializable toSerialize)
- static Serializable [deserialize](#) (byte[] toDeserialize)

5.69.1 Detailed Description

Utility class used to serialize and deserialize data. The class operations are based upon the Apache's [Serialization](#)↔Utils suite.

Author

Stelluti Francesco Pio
Zamponi Marco

5.69.2 Member Function Documentation

5.69.2.1 deserialize()

```
static Serializable quasylab.sibilla.core.network.serialization.Serializer.deserialize (
    byte[] toDeserialize ) [static]
```

Deserializes a byte array.

Parameters

<i>toDeserialize</i>	byte array to be deserialized
----------------------	-------------------------------

Returns

deserialized Serializable instance

5.69.2.2 `serialize()`

```
static byte [] quasylib.sibilla.core.network.serialization.Serializer.serialize (
    Serializable toSerialize ) [static]
```

Serializes a Serializable instance.

Parameters

<i>toSerialize</i>	instance to be compressed
--------------------	---------------------------

Returns

serialized byte array

5.70 `quasylib.sibilla.core.util.SibillaMessages` Class Reference

Static Public Member Functions

- static String `createdTimeStepWithNonPositiveTime` (double time)
- static String `aPositiveValueIsExpected` (double value)
- static String `wrongNumberOfParameters` (int expected, int actual)

Static Public Attributes

- static final String `ILLEGAL_TIME_IN_TIMESTEP` = "A time step must be a value greater than 0 (%g is used)."
- static final String `A_POSITIVE_VALUE_IS_EXPECTED` = "A value greater than 0 is expected (%g is used)."

5.70.1 Detailed Description

Utility class used to build error and info messages.

5.70.2 Member Function Documentation

5.70.2.1 `aPositiveValueIsExpected()`

```
static String quasylib.sibilla.core.util.SibillaMessages.aPositiveValueIsExpected (
    double value ) [static]
```

A value greater than 0 is expexted.

Parameters

<i>value</i>	used value.
--------------	-------------

Returns

error message.

5.70.2.2 createdTimeStepWithNonPositiveTime()

```
static String quasylab.sibilla.core.util.SibillaMessages.createdTimeStepWithNonPositiveTime (
    double time ) [static]
```

A time step must be a value greater than 0.

Parameters

<i>time</i>	used time.
-------------	------------

Returns

error message.

5.70.2.3 wrongNumberOfParameters()

```
static String quasylab.sibilla.core.util.SibillaMessages.wrongNumberOfParameters (
    int expected,
    int actual ) [static]
```

5.70.3 Member Data Documentation**5.70.3.1 A_POSITIVE_VALUE_IS_EXPECTED**

```
final String quasylab.sibilla.core.util.SibillaMessages.A_POSITIVE_VALUE_IS_EXPECTED = "A
value greater than 0 is expected (%g is used)." [static]
```

5.70.3.2 ILLEGAL_TIME_IN_TIMESTEP

```
final String quasylab.sibilla.core.util.SibillaMessages.ILLEGAL_TIME_IN_TIMESTEP = "A time
step must be a value greater than 0 (%g is used)." [static]
```

5.71 quasylab.sibilla.core.network.SimulationDataSet< S extends State > Class Template Reference

Inheritance diagram for quasylab.sibilla.core.network.SimulationDataSet< S extends State >:

Public Member Functions

- [SimulationDataSet](#) (RandomGenerator random, [ModelDefinition](#)< S > modelDefinition, [Model](#)< S > model, S initialState, [SamplingFunction](#)< S > sampling_function, int replica, double deadline)
- int [hashCode](#) ()
- boolean [equals](#) (Object obj)

- [ModelDefinition](#)< S > [getModelDefinition](#) ()
- [Model](#)< S > [getModel](#) ()
- S [getModelInitialState](#) ()
- [SamplingFunction](#)< S > [getModelSamplingFunction](#) ()
- int [getReplica](#) ()
- double [getDeadline](#) ()
- String [toString](#) ()

5.71.1 Detailed Description

Class that stores info about the simulation that is executed by slaves.

Parameters

<S>	The quasylab.sibilla.core.past.State of the simulation model.
-----	---

Author

Stelluti Francesco Pio
Zamponi Marco

5.71.2 Constructor & Destructor Documentation

5.71.2.1 SimulationDataSet()

```

quasylab.sibilla.core.network.SimulationDataSet< S extends State >.SimulationDataSet (
    RandomGenerator random,

```

```

ModelDefinition< S > modelDefinition,
Model< S > model,
S initialState,
SamplingFunction< S > sampling_function,
int replica,
double deadline )

```

Creates a [SimulationDataSet](#) object with the parameters given in input.

Parameters

<i>random</i>	RandomGenerator used by the simulation
<i>modelDefinition</i>	quasylab.sibilla.core.models.ModelDefinition that represent the Model used in the simulation
<i>model</i>	quasylab.sibilla.core.models.Model used in the simulation
<i>initialState</i>	Initial state of the model
<i>sampling_function</i>	quasylab.sibilla.core.simulator.sampling.SamplingFunction used to sample the model
<i>replica</i>	Number of times the simulation is executed
<i>deadline</i>	The deadline of the simulation

5.71.3 Member Function Documentation

5.71.3.1 equals()

```

boolean quasylab.sibilla.core.network.SimulationDataSet< S extends State >.equals (
    Object obj )

```

5.71.3.2 getDeadline()

```
double quasylab.sibilla.core.network.SimulationDataSet< S extends State >.getDeadline ( )
```

Returns the deadline of the simulation.

Returns

deadline of the simulation

5.71.3.3 getModel()

```
Model<S> quasylab.sibilla.core.network.SimulationDataSet< S extends State >.getModel ( )
```

[quasylab.sibilla.core.models.Model](#) used in the simulation.

Returns

Model used in the simulation

5.71.3.4 getModelDefinition()

```
ModelDefinition<S> quasylib.sibilla.core.network.SimulationDataSet< S extends State >.get↔  
ModelDefinition ( )
```

Returns the [quasylib.sibilla.core.models.ModelDefinition](#) that represent the Model used in the simulation.

Returns

ModelDefinition that represent the Model used in the simulation

5.71.3.5 getModelInitialState()

```
S quasylib.sibilla.core.network.SimulationDataSet< S extends State >.getModelInitialState ( )
```

Returns the initial state of the model.

Returns

initial state of the model

5.71.3.6 getModelSamplingFunction()

```
SamplingFunction<S> quasylib.sibilla.core.network.SimulationDataSet< S extends State >.get↔  
ModelSamplingFunction ( )
```

Returns the [quasylib.sibilla.core.simulator.sampling.SamplingFunction](#) used to sample the model.

Returns

SamplingFunction used to sample the model

5.71.3.7 getRandomGenerator()

```
RandomGenerator quasylib.sibilla.core.network.SimulationDataSet< S extends State >.getRandom↔  
Generator ( )
```

Returns the RandomGenerator used in the simulation.

Returns

RandomGenerator used in the simulation

5.71.3.8 getReplica()

```
int quasylib.sibilla.core.network.SimulationDataSet< S extends State >.getReplica ( )
```

Return the number of times the simulation is executed.

Returns

number of times the simulation is executed

5.71.3.9 hashCode()

```
int quasylib.sibilla.core.network.SimulationDataSet< S extends State >.hashCode ( )
```

5.71.3.10 toString()

```
String quasylib.sibilla.core.network.SimulationDataSet< S extends State >.toString ( )
```

5.72 quasylib.sibilla.core.simulator.SimulationEnvironment Class Reference

Inheritance diagram for quasylib.sibilla.core.simulator.SimulationEnvironment:

Public Member Functions

- [SimulationEnvironment](#) ()
- [SimulationEnvironment](#) ([SimulationManagerFactory](#) simulationManagerFactory)

Static Public Attributes

- static final [SimulationManagerFactory](#) [DEFAULT_FACTORY](#) = [SequentialSimulationManager::new](#)
- static boolean [silent](#) = true

5.72.1 Detailed Description

An object responsible for managing simulations. When a new request is received, it is delegated to a [SimulationManager](#) that is built via [SimulationManagerFactory](#).

5.72.2 Constructor & Destructor Documentation

5.72.2.1 SimulationEnvironment() [1/2]

```
quasylab.sibilla.core.simulator.SimulationEnvironment.SimulationEnvironment ( )
```

Creates a new simulation environment with default simulation factory. The latter is a multithreaded based simulation factory.

5.72.2.2 SimulationEnvironment() [2/2]

```
quasylab.sibilla.core.simulator.SimulationEnvironment.SimulationEnvironment (
    SimulationManagerFactory simulationManagerFactory )
```

Creates a new simulation environment given a [SimulationManagerFactory](#). The latter is used to instantiate the [QueuedSimulationManager](#) used to handle the specific simulation.

Parameters

<i>simulationManagerFactory</i>	
---------------------------------	--

5.72.3 Member Data Documentation

5.72.3.1 DEFAULT_FACTORY

```
final SimulationManagerFactory quasylab.sibilla.core.simulator.SimulationEnvironment.DEFAULT←
_FACTORY = SequentialSimulationManager::new [static]
```

Default simulation manager factory.

5.72.3.2 silent

```
boolean quasylab.sibilla.core.simulator.SimulationEnvironment.silent = true [static]
```

5.73 quasylib.sibilla.core.simulator.SimulationManager< S extends State > Interface Template Reference

Public Member Functions

- void `simulate` (`SimulationUnit`< S > unit)
- int `pendingTasks` ()
- void `join` () throws `InterruptedException`
- void `shutdown` () throws `InterruptedException`
- boolean `isRunning` ()

5.73.1 Detailed Description

A simulation manager has the responsibility to execute a number of simulation units.

5.73.2 Member Function Documentation

5.73.2.1 `isRunning()`

```
boolean quasylib.sibilla.core.simulator.SimulationManager< S extends State >.isRunning ( )
```

5.73.2.2 `join()`

```
void quasylib.sibilla.core.simulator.SimulationManager< S extends State >.join ( ) throws  
InterruptedException
```

Waits until all the pending tasks are terminated.

Exceptions

<i>InterruptedException</i>	if current thread is interrupted while its waiting for ending of simulation.
-----------------------------	--

5.73.2.3 `pendingTasks()`

```
int quasylib.sibilla.core.simulator.SimulationManager< S extends State >.pendingTasks ( )
```

Returns the number of simulation tasks that are currently executed and are not yet terminated.

Returns

the number of simulation tasks that are currently executed and are not yet terminated.

5.73.2.4 shutdown()

```
void quasylib.sibilla.core.simulator.SimulationManager< S extends State >.shutdown ( ) throws
InterruptedException
```

5.73.2.5 simulate()

```
void quasylib.sibilla.core.simulator.SimulationManager< S extends State >.simulate (
    SimulationUnit< S > unit )
```

Schedules the execution of a given [SimulationUnit](#).

Parameters

<i>unit</i>	simulation unit to execute.
-------------	-----------------------------

Inheritance diagram for quasylib.sibilla.core.network.slave.SimulationServer:

Public Member Functions

- void [start](#) (int port) throws IOException

5.76.1 Detailed Description

Interface for slave servers that execute simulations

Author

Belenchia Matteo

Stelluti Francesco Pio

Zamponi Marco

5.76.2 Member Function Documentation

5.76.2.1 start()

```
void quasylib.sibilla.core.network.slave.SimulationServer.start (
    int port ) throws IOException
```

Creates and starts the slave server on the given port.

Parameters

<i>port</i>	port used by the slave server to manage the incoming requests from the master servers
-------------	---

Exceptions

<i>IOException</i>	when problems arise in network interfaces usage
--------------------	---

Implemented in [quasylib.sibilla.core.network.slave.BasicSimulationServer](#).

5.78.1 Detailed Description

Wraps the state of a client submitted simulation. Its updates can be listened by `java.beans.PropertyChangeListener` instances.

Author

Stelluti Francesco Pio

Zamponi Marco

5.78.2 Constructor & Destructor Documentation

5.78.2.1 SimulationState()

```
quasylab.sibilla.core.network.master.SimulationState.SimulationState (
    MasterState masterState,
    NetworkInfo masterNetworkInfo,
    NetworkInfo clientNetworkInfo,
    Set< NetworkInfo > slaveNetworkInfos,
    MasterServerSimulationEnvironment masterServerSimulationEnvironment )
```

Initializes the state

Parameters

<i>masterState</i>	the state of the master that initiated the simulation. It will be updated at every simulation update.
<i>masterNetworkInfo</i>	related to the master that initiated the simulation.
<i>clientNetworkInfo</i>	related to the client that submitted the simulation.
<i>slaveNetworkInfos</i>	related to the slave servers the simulation will be submitted to.
<i>masterServerSimulationEnvironment</i>	the environment that manages the simulation. It will be updated at every simulation update.

5.78.3 Member Function Documentation

5.78.3.1 addPropertyChangeListener()

```
synchronized void quasylab.sibilla.core.network.master.SimulationState.addPropertyChangeListener (
    String property,
    PropertyChangeListener pcl )
```

5.78.3.2 clientConnection()

```
TCPNetworkManager quasylab.sibilla.core.network.master.SimulationState.clientConnection ( )
```

Returns

The client communication related manager.

5.78.3.3 clone()

```
SimulationState quasylab.sibilla.core.network.master.SimulationState.clone ( )
```

Returns

a deep clone of the quasylab.sibilla.core.network.master.SimulationState in which is called.

5.78.3.4 compareTo()

```
int quasylab.sibilla.core.network.master.SimulationState.compareTo (
    SimulationState simulationState )
```

Compares two simulation states for ordering.

Parameters

<i>simulationState</i>	the quasylab.sibilla.core.network.master.SimulationState to be compared.
------------------------	--

Returns

the result of the compareTo method called on the lastUpdate instance.

5.78.3.5 decreaseRunningServers()

```
synchronized void quasylab.sibilla.core.network.master.SimulationState.decreaseRunningServers
( )
```

Decreases the number of slave servers that are executing simulations.

5.78.3.6 equals()

```
boolean quasylab.sibilla.core.network.master.SimulationState.equals (
    Object o )
```

5.78.3.7 getClientNetworkInfo()

```
synchronized NetworkInfo quasylib.sibilla.core.network.master.SimulationState.getClient↵  
NetworkInfo ( )
```

Returns

Network related infos about the client that submitted the simulation.

5.78.3.8 getLastUpdate()

```
synchronized Date quasylib.sibilla.core.network.master.SimulationState.getLastUpdate ( )
```

Returns

The last time the state was updated.

5.78.3.9 getMasterNetworkInfo()

```
synchronized NetworkInfo quasylib.sibilla.core.network.master.SimulationState.getMaster↵  
NetworkInfo ( )
```

Returns

Network related infos about the master server that initiated the simulation.

5.78.3.10 getPendingTasks()

```
synchronized int quasylib.sibilla.core.network.master.SimulationState.getPendingTasks ( )
```

Returns

The number of pending simulation tasks.

5.78.3.11 getRegisteredSlaveServers()

```
synchronized int quasylib.sibilla.core.network.master.SimulationState.getRegisteredSlave↵  
Servers ( )
```

Returns

the number of registered and running slave servers.

5.78.3.12 getRunningSlaveServers()

```
synchronized int quasylab.sibilla.core.network.master.SimulationState.getRunningSlaveServers (
)
```

Returns

The number of slave servers that are currently executing the simulation.

5.78.3.13 getSimulationModelName()

```
String quasylab.sibilla.core.network.master.SimulationState.getSimulationModelName ( )
```

Returns

the simulation model name.

5.78.3.14 getSimulationStartDate()

```
synchronized Date quasylab.sibilla.core.network.master.SimulationState.getSimulationStartDate
( )
```

Returns

The date the simulation was initiated.

5.78.3.15 getSlaveServersStates()

```
synchronized Set<SlaveState> quasylab.sibilla.core.network.master.SimulationState.getSlave←
ServersStates ( )
```

Returns

java.util.Set related to registered slave servers' states.

5.78.3.16 getSlaveStateByServerInfo()

```
synchronized SlaveState quasylab.sibilla.core.network.master.SimulationState.getSlaveStateBy←
ServerInfo (
    NetworkInfo slaveNetworkInfo )
```

Returns the state associated with a specific slave server.

Parameters

<i>slaveNetworkInfo</i>	related to the slave.
-------------------------	-----------------------

Returns

[quasylab.sibilla.core.network.slave.SlaveState](#) associated with the slave, null if the slave requested was not present.

5.78.3.17 getTotalSimulationTasks()

```
synchronized int quasylab.sibilla.core.network.master.SimulationState.getTotalSimulationTasks
( )
```

Returns

The number of total simulation tasks.

5.78.3.18 hashCode()

```
int quasylab.sibilla.core.network.master.SimulationState.hashCode ( )
```

5.78.3.19 increaseRunningServers()

```
synchronized void quasylab.sibilla.core.network.master.SimulationState.increaseRunningServers
( )
```

Increases the number of slave servers that are executing simulations.

5.78.3.20 isConcluded()

```
boolean quasylab.sibilla.core.network.master.SimulationState.isConcluded ( )
```

Returns

if the simulation is concluded.

5.78.3.21 propertyChange()

```
void quasylab.sibilla.core.network.master.SimulationState.propertyChange (
    PropertyChangeEvent propertyChangeEvent )
```

5.78.3.22 setClientConnection()

```
void quasylab.sibilla.core.network.master.SimulationState.setClientConnection (
    TCPNetworkManager clientConnection )
```

Sets a new client communication related manager.

Parameters

<i>clientConnection</i>	the manager to be set.
-------------------------	------------------------

5.78.3.23 setConcluded()

```
synchronized void quasylab.sibilla.core.network.master.SimulationState.setConcluded ( )
```

Marks the simulation related to this state as concluded.

5.78.3.24 setPendingTasks()

```
synchronized void quasylab.sibilla.core.network.master.SimulationState.setPendingTasks (
    int pendingTasks )
```

Sets the value of pending simulation tasks.

Parameters

<i>pendingTasks</i>	the value to be set.
---------------------	----------------------

5.78.3.25 setSimulationDataSet()

```
void quasylab.sibilla.core.network.master.SimulationState.setSimulationDataSet (
    SimulationDataSet<?> simulationDataSet )
```

Sets a new simulation data set.

Parameters

<i>simulationDataSet</i>	the set to be set.
--------------------------	--------------------

5.78.3.26 setSimulationModelName()

```
void quasylab.sibilla.core.network.master.SimulationState.setSimulationModelName (
    String simulationModelName )
```

Sets the simulation model name.

Parameters

<i>simulationModelName</i>	the name to be set.
----------------------------	---------------------

5.78.3.27 simulationDataSet()

```
SimulationDataSet<?> quasylib.sibilla.core.network.master.SimulationState.simulationDataSet (
)
```

Returns

The wrapper related to the simulation datas.

5.83 quasylib.sibilla.core.network.slave.SlaveCommand Enum Reference

Public Attributes

- [PONG](#)
- [INIT_RESPONSE](#)
- [CLOSE_CONNECTION](#)

5.83.1 Detailed Description

All the possible command and signals that can be sent from a slave server.

Author

Stelluti Francesco Pio
Zamponi Marco

5.83.2 Member Data Documentation

5.83.2.1 CLOSE_CONNECTION

```
quasylib.sibilla.core.network.slave.SlaveCommand.CLOSE_CONNECTION
```

The command sent by a slave server to inform that the connection with an host will be closed.

5.83.2.2 INIT_RESPONSE

```
quasylib.sibilla.core.network.slave.SlaveCommand.INIT_RESPONSE
```

The command sent by a slave server to respond to a master server init command.

5.83.2.3 PONG

`quasylib.sibilla.core.network.slave.SlaveCommand.PONG`

The command sent by a slave server respond to a master server ping command.

5.84.1 Detailed Description

Wraps the state of a slave server. Its updates can be listened by `java.beans.PropertyChangeListener` instances.

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.84.2 Constructor & Destructor Documentation

5.84.2.1 SlaveState()

```
quasylab.sibilla.core.network.slave.SlaveState.SlaveState (
    SimulationState simulationState,
    NetworkInfo slaveInfo )
```

5.84.3 Member Function Documentation

5.84.3.1 addPropertyChangeListener()

```
synchronized void quasylab.sibilla.core.network.slave.SlaveState.addPropertyChangeListener (
    String property,
    PropertyChangeListener pcl )
```

5.84.3.2 canCompleteTask()

```
boolean quasylab.sibilla.core.network.slave.SlaveState.canCompleteTask (
    int tasks )
```

Gets the possibility to complete a certain number of tasks for this server within the time limit

Parameters

<i>tasks</i>	number of tasks to be executed
--------------	--------------------------------

Returns

whether the server can execute these tasks in time or not

5.84.3.3 clone()

```
SlaveState quasylab.sibilla.core.network.slave.SlaveState.clone ( )
```

5.84.3.4 equals()

```
boolean quasylib.sibilla.core.network.slave.SlaveState.equals (
    Object o )
```

5.84.3.5 forceExpiredTimeLimit()

```
void quasylib.sibilla.core.network.slave.SlaveState.forceExpiredTimeLimit ( )
```

Lowers the expected tasks following the TCP window size algorithm and signals it to the listeners

5.84.3.6 getExpectedTasks()

```
int quasylib.sibilla.core.network.slave.SlaveState.getExpectedTasks ( )
```

Returns

number of tasks that the slave server is expected to execute within the set time limit.

5.84.3.7 getSlaveInfo()

```
NetworkInfo quasylib.sibilla.core.network.slave.SlaveState.getSlaveInfo ( )
```

Returns

the network related info about this slave server.

5.84.3.8 getTimeLimit()

```
double quasylib.sibilla.core.network.slave.SlaveState.getTimeLimit ( )
```

Gets the time limit of this server after which the expected tasks are halved

Returns

time limit length of this server

5.84.3.9 `getTimeout()`

```
double quasylib.sibilla.core.network.slave.SlaveState.getTimeout ( )
```

Gets timeout time of this server after which the server is removed

Returns

timeout length of this server

5.84.3.10 `hashCode()`

```
int quasylib.sibilla.core.network.slave.SlaveState.hashCode ( )
```

5.84.3.11 `isRemoved()`

```
boolean quasylib.sibilla.core.network.slave.SlaveState.isRemoved ( )
```

Returns

whether this slave server has been removed from the master server known slaves.

5.84.3.12 `isTimeout()`

```
boolean quasylib.sibilla.core.network.slave.SlaveState.isTimeout ( )
```

Returns

whether this slave server didn't send computation results to a master within time limit.

5.84.3.13 `migrate()`

```
void quasylib.sibilla.core.network.slave.SlaveState.migrate (
    NetworkInfo newSlaveInfo )
```

Migrates the network info from this slave server to another slave server

5.84.3.14 setRemoved()

```
void quasylab.sibilla.core.network.slave.SlaveState.setRemoved ( )
```

Sets this server as removed and updates his listeners

5.84.3.15 timedOut()

```
void quasylab.sibilla.core.network.slave.SlaveState.timedOut ( )
```

Sets this server as timed out and updates his listeners

5.84.3.16 toString()

```
String quasylab.sibilla.core.network.slave.SlaveState.toString ( )
```

5.84.3.17 update()

```
void quasylab.sibilla.core.network.slave.SlaveState.update (
    long elapsedTime,
    int tasksSent )
```

Updates the state of the slave server given the data about new executions

Parameters

<i>elapsedTime</i>	time used to execute the tasks
<i>tasksSent</i>	number of tasks executed

5.84.4 Member Data Documentation

5.84.4.1 devRTT

```
double quasylab.sibilla.core.network.slave.SlaveState.devRTT
```

The standard deviation of the round trip time of the simulation tasks execution

5.84.4.2 estimatedRTT

```
double quasylab.sibilla.core.network.slave.SlaveState.estimatedRTT
```

The estimated round trip time of the simulation tasks to be executed

- void [setTrustStoreType](#) (String trustStoreType)
- SSLContext [createSSLContext](#) () throws IOException

Static Public Member Functions

- static [SSLUtils getInstance](#) ()

5.85.1 Detailed Description

Utility class used to store the data used to initiate a TLS connection and to easily create SSLContext instances

Author

Stelluti Francesco Pio
Zamponi Marco

5.85.2 Member Function Documentation

5.85.2.1 createSSLContext()

```
SSLContext quasylab.sibilla.core.network.util.SSLUtils.createSSLContext ( ) throws IOException
```

Creates the SSLContext with the parameters that has been set previously.

Returns

SSLContext used to create a secure connection

Exceptions

<i>IOException</i>	when TrustStores and KeyStores filer are invalid.
--------------------	---

5.85.2.2 getInstance()

```
static SSLUtils quasylab.sibilla.core.network.util.SSLUtils.getInstance ( ) [static]
```

5.85.2.3 setKeyStorePass()

```
void quasylab.sibilla.core.network.util.SSLUtils.setKeyStorePass (
    String keyStorePass )
```

5.85.2.4 setKeyStorePath()

```
void quasylab.sibilla.core.network.util.SSLUtils.setKeyStorePath (
    String keyStorePath )
```

5.85.2.5 setKeyStoreType()

```
void quasylab.sibilla.core.network.util.SSLUtils.setKeyStoreType (
    String keyStoreType )
```

5.85.2.6 setTrustStorePass()

```
void quasylab.sibilla.core.network.util.SSLUtils.setTrustStorePass (
    String trustStorePass )
```

5.85.2.7 setTrustStorePath()

```
void quasylab.sibilla.core.network.util.SSLUtils.setTrustStorePath (
    String trustStorePath )
```

5.85.2.8 setTrustStoreType()

```
void quasylab.sibilla.core.network.util.SSLUtils.setTrustStoreType (
    String trustStoreType )
```

5.86 quasylab.sibilla.core.network.util.StartupUtils Class Reference

Static Public Member Functions

- static Map< String, String > [parseOptions](#) (String[] args)
- static [TCPNetworkManagerType](#) [TCPNetworkManagerParser](#) (String type)
- static [UDPNetworkManagerType](#) [UDPNetworkManagerParser](#) (String type)

5.86.1 Detailed Description

Utility class used to create startup classes for new masters, slaves and servers.

Author

Stelluti Francesco Pio
Zamponi Marco

5.86.2 Member Function Documentation

5.86.2.1 parseOptions()

```
static Map<String, String> quasylab.sibilla.core.network.util.StartupUtils.parseOptions (
    String[] args ) [static]
```

Parameters

<i>args</i>	from the console
-------------	------------------

Returns

Map containing all the console startup args and the related values

5.86.2.2 TCPNetworkManagerParser()

```
static TCPNetworkManagerType quasylab.sibilla.core.network.util.StartupUtils.TCPNetwork←
ManagerParser (
    String type ) [static]
```

Parameters

<i>type</i>	name of the quasylab.sibilla.core.network.communication.TCPNetworkManagerType to obtain
-------------	---

Returns

[quasylib.sibilla.core.network.communication.TCPNetworkManagerType](#) related to the name passed as argument

5.86.2.3 UDPNetworkManagerParser()

```
static UDPNetworkManagerType quasylib.sibilla.core.network.util.StartupUtils.UDPNetworkManagerParser (
    String type ) [static]
```

Parameters

<i>type</i>	name of the quasylib.sibilla.core.network.communication.UDPNetworkManagerType to obtain
-------------	---

Returns

[quasylib.sibilla.core.network.communication.UDPNetworkManagerType](#) related to the name passed as argument

Inheritance diagram for quasylab.sibilla.core.models.StatePredicate< T >:

Public Member Functions

- boolean [check](#) (T t)

Public Attributes

- [StatePredicate](#)< Object > [TRUE](#) = s -> true

5.89.1 Detailed Description

Indicates a condition or an event that we can observe in a state.

Parameters

<T>	
-----	--

5.89.2 Member Function Documentation

5.89.2.1 check()

```
boolean quasylab.sibilla.core.models.StatePredicate< T >.check (
    T t )
```

Checks if a state satisfies the predicate.

Parameters

t	a state
---	---------

Returns

true if the state t satisfies the predicate.

5.89.3 Member Data Documentation

5.89.3.1 TRUE

```
StatePredicate<Object> quasylib.sibilla.core.models.StatePredicate< T >.TRUE = s -> true
```

Public Member Functions

- [SteadyStateSolver](#) ([ContinuousTimeMarkovChain](#)< S > chain, S init)
- void [computeBSCC](#) ()

5.92.1 Detailed Description

Author

loreti

Parameters

<S>	
-----	--

5.92.2 Constructor & Destructor Documentation

5.92.2.1 SteadyStateSolver()

```
quasylib.sibilla.core.markov.SteadyStateSolver< S >.SteadyStateSolver (
    ContinuousTimeMarkovChain< S > chain,
    S init )
```

5.92.3 Member Function Documentation

5.92.3.1 computeBSCC()

```
void quasylib.sibilla.core.markov.SteadyStateSolver< S >.computeBSCC ( )
```

5.93 `quasylab.sibilla.core.models.StepFunction< S >` Interface Template Reference

Public Member Functions

- `S` [step](#) (`RandomGenerator r`, `double now`, `double dt`)

5.93.1 Detailed Description

Implements the lazy evaluation of the transition step of a stochastic model.

5.93.2 Member Function Documentation

5.93.2.1 `step()`

```
S quasylab.sibilla.core.models.StepFunction< S >.step (
    RandomGenerator r,
    double now,
    double dt )
```

Computes the next state associated to a transition.

Parameters

<i>r</i>	random
<i>now</i>	
<i>dt</i>	

Returns

5.94 `quasylab.sibilla.core.markov.TaxiScenarioMC` Class Reference

Static Public Member Functions

- static `HashMap< State, Double >` [next](#) (`State s`)

- [TCPNetworkManagerType](#) [getType](#) ()

Additional Inherited Members

5.95.1 Detailed Description

Simple TCP based communication class.

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.95.2 Constructor & Destructor Documentation

5.95.2.1 TCPDefaultNetworkManager()

```
quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.TCPDefaultNetworkManager
(
    Socket socket ) throws IOException
```

Initiates the manager. The socket upon which the communication is based has already been built.

Parameters

<i>socket</i>	upon which the network communication will be based
---------------	--

Exceptions

<i>IOException</i>	
--------------------	--

5.95.3 Member Function Documentation

5.95.3.1 closeConnection()

```
void quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.closeConnection ( )
throws IOException
```

Closes the network communication.

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.95.3.2 getSocket()

```
Socket quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.getSocket ( )
```

Returns

the Socket upon which is based the network communication.

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.95.3.3 getType()

```
TCPNetworkManagerType quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.↔
getType ( )
```

Returns

the [quasylab.sibilla.core.network.communication.TCPNetworkManagerType](#) associated with the [quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager](#) implementation.

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.95.3.4 readObject()

```
byte [] quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.readObject ( )  
throws IOException
```

Reads incoming data from the network.

Returns

byte array of the data read from the network

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.95.3.5 writeObject()

```
void quasylab.sibilla.core.network.communication.TCPDefaultNetworkManager.writeObject (   
    byte[] toWrite ) throws IOException
```

Sends data through the network.

Parameters

<i>toWrite</i>	byte array of data that will be sent over
----------------	---

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.96 quasylab.sibilla.core.network.communication.TCPNetworkManager Interface Reference

Inheritance diagram for quasylab.sibilla.core.network.communication.TCPNetworkManager:

Public Member Functions

- `byte[] readObject ()` throws `IOException`
- `void writeObject (byte[] toWrite)` throws `IOException`
- `Socket getSocket ()`
- default `NetworkInfo getNetworkInfo ()`
- `void closeConnection ()` throws `IOException`
- `TCPNetworkManagerType getType ()`

Static Public Member Functions

- static `TCPNetworkManager createNetworkManager (NetworkInfo info)` throws `IOException`
- static `TCPNetworkManager createNetworkManager (TCPNetworkManagerType networkType, Socket socket)` throws `IOException`
- static `ServerSocket createServerSocket (TCPNetworkManagerType networkType, int port)` throws `IOException`

5.96.1 Detailed Description

Interface that needs to be extended from all of the communication related classes that are based upon the TCP transport protocol.

Author

Belenchia Matteo
 Stelluti Francesco Pio
 Zamponi Marco

5.96.2 Member Function Documentation

5.96.2.1 closeConnection()

```
void quasylab.sibilla.core.network.communication.TCPNetworkManager.closeConnection ( ) throws
IOException
```

Closes the network communication.

Exceptions

<code>IOException</code>	
--------------------------	--

Implemented in `quasylab.sibilla.core.network.communication.TCPSecureNetworkManager`, and `quasylab.sibilla.core.network.commu`

5.96.2.2 createNetworkManager() [1/2]

```
static TCPNetworkManager quasylab.sibilla.core.network.communication.TCPNetworkManager.↵  
createNetworkManager (   
    NetworkInfo info ) throws IOException [static]
```

Factory method used to obtain quasylab.sibilla.core.network.communication.TCPNetworkManager implementations' instances. Used in classes that want to initiate a network communication.

Parameters

<i>info</i>	The network related infos about the connection that the manager will manage
-------------	---

Returns

quasylab.sibilla.core.network.communication.TCPNetworkManager that will manage the requested connection

Exceptions

<i>IOException</i>	
--------------------	--

5.96.2.3 createNetworkManager() [2/2]

```
static TCPNetworkManager quasylab.sibilla.core.network.communication.TCPNetworkManager.↵  
createNetworkManager (   
    TCPNetworkManagerType networkType,   
    Socket socket ) throws IOException [static]
```

Factory method used to obtain quasylab.sibilla.core.network.communication.TCPNetworkManager implementations' instances. Used in classes that want to initiate a network communication.

Parameters

<i>networkType</i>	the type associated with the implementation of quasylab.sibilla.core.network.communication.TCPNetworkManager that will be instantiated
<i>socket</i>	upon which the network communication will be based

Returns

quasylab.sibilla.core.network.communication.TCPNetworkManager that will manage the requested connection

Exceptions

<i>IOException</i>	
--------------------	--

5.96.2.4 createServerSocket()

```
static ServerSocket quasylab.sibilla.core.network.communication.TCPNetworkManager.create↵  
ServerSocket (   
    TCPNetworkManagerType networkType,   
    int port ) throws IOException [static]
```

Factory method used to obtain ServerSocket instances. Used in classes that want to accept incoming network communications.

Parameters

<i>networkType</i>	the type associated with the implementation of quasylab.sibilla.core.network.communication.TCPNetworkManager that will be instantiated
<i>port</i>	used to listen for incoming connections

Returns

ServerSocket used to accept incoming connections

Exceptions

<i>IOException</i>	
--------------------	--

5.96.2.5 getNetworkInfo()

```
default NetworkInfo quasylab.sibilla.core.network.communication.TCPNetworkManager.getNetwork↵  
Info ( )
```

Returns

a copy of the [quasylab.sibilla.core.network.NetworkInfo](#) instance associated with the manager.

5.96.2.6 getSocket()

```
Socket quasylab.sibilla.core.network.communication.TCPNetworkManager.getSocket ( )
```

Returns

the Socket upon which is based the network communication.

Implemented in [quasylab.sibilla.core.network.communication.TCPSecureNetworkManager](#), and [quasylab.sibilla.core.network.commu](#)

5.96.2.7 getType()

```
TCPNetworkManagerType quasylab.sibilla.core.network.communication.TCPNetworkManager.getType (
)
```

Returns

the [quasylab.sibilla.core.network.communication.TCPNetworkManagerType](#) associated with the [quasylab.sibilla.core.network.communication.TCPNetworkManager](#) implementation.

Implemented in [quasylab.sibilla.core.network.communication.TCPSecureNetworkManager](#), and [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.96.2.8 readObject()

```
byte [] quasylab.sibilla.core.network.communication.TCPNetworkManager.readObject ( ) throws
IOException
```

Reads incoming data from the network.

Returns

byte array of the data read from the network

Exceptions

<i>IOException</i>	
--------------------	--

Implemented in [quasylab.sibilla.core.network.communication.TCPSecureNetworkManager](#), and [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.96.2.9 writeObject()

```
void quasylab.sibilla.core.network.communication.TCPNetworkManager.writeObject (
    byte[] toWrite ) throws IOException
```

Sends data through the network.

Parameters

<i>toWrite</i>	byte array of data that will be sent over
----------------	---

Exceptions

<i>IOException</i>	
--------------------	--

Implemented in [quasylab.sibilla.core.network.communication.TCPSecureNetworkManager](#), and [quasylab.sibilla.core.network.commu](#)

5.97 quasylab.sibilla.core.network.communication.TCPNetworkManagerType Enum Reference

Inheritance diagram for quasylab.sibilla.core.network.communication.TCPNetworkManagerType:

Public Attributes

- [DEFAULT](#)
- [SECURE](#)

5.97.1 Detailed Description

All of the names associated to the classes that implement [quasylab.sibilla.core.network.communication.TCPNetworkManager](#) and are based upon the TCP transport protocol.

Author

Belenchia Matteo
Stelluti Francesco Pio
Zamponi Marco

5.97.2 Member Data Documentation

5.97.2.1 DEFAULT

`quasylab.sibilla.core.network.communication.TCPNetworkManagerType.DEFAULT`

The simplest interface implementation.

5.97.2.2 SECURE

`quasylab.sibilla.core.network.communication.TCPNetworkManagerType.SECURE`

The implementation that relies upon SSL.

5.98 quasylib.sibilla.core.network.communication.TCPSecureNetworkManager Class Reference

Inheritance diagram for quasylib.sibilla.core.network.communication.TCPSecureNetworkManager:

Public Member Functions

- [TCPSecureNetworkManager](#) ([NetworkInfo](#) networkInfo) throws IOException

Additional Inherited Members

5.98.1 Detailed Description

TCP based communication class that relies on TLS protocol.

Author

Stelluti Francesco Pio
Zamponi Marco

5.98.2 Constructor & Destructor Documentation

5.98.2.1 TCPSecureNetworkManager() [1/2]

```
quasylib.sibilla.core.network.communication.TCPSecureNetworkManager.TCPSecureNetworkManager (
    NetworkInfo networkInfo ) throws IOException
```

Initiates the manager as a client. The socket upon which the communication is based will be built.

Parameters

<i>networkInfo</i>	The network related infos about the connection that the manager will manage
--------------------	---

Exceptions

<i>IOException</i>	
--------------------	--

5.98.2.2 TCPSecureNetworkManager() [2/2]

```
quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.TCPSecureNetworkManager (
    Socket socket ) throws IOException
```

Initiates the manager as a server. The socket upon which the communication is based has already been built.

Parameters

<i>socket</i>	upon which the network communication will be based
---------------	--

Exceptions

<i>IOException</i>	
--------------------	--

5.98.3 Member Function Documentation**5.98.3.1 closeConnection()**

```
void quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.closeConnection ( )
throws IOException
```

Closes the network communication.

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.98.3.2 getSocket()

```
Socket quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.getSocket ( )
```

Returns

the Socket upon which is based the network communication.

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.98.3.3 getType()

```
TCPNetworkManagerType quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.↔
getType ( )
```

Returns

the [quasylab.sibilla.core.network.communication.TCPNetworkManagerType](#) associated with the [quasylab.sibilla.core.network.communication.TCPSecureNetworkManager](#) implementation.

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.98.3.4 readObject()

```
byte [] quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.readObject ( )
throws IOException
```

Reads incoming data from the network.

Returns

byte array of the data read from the network

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

5.98.3.5 writeObject()

```
void quasylab.sibilla.core.network.communication.TCPSecureNetworkManager.writeObject (
    byte[] toWrite ) throws IOException
```

Sends data through the network.

Parameters

<i>toWrite</i>	byte array of data that will be sent over
----------------	---

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.TCPNetworkManager](#).

```

5.104 `quasylab.sibilla.core.models.TimeStep< S >` Class Template Reference

Public Member Functions

- [TimeStep](#) (double time, S value)
- S [getValue](#) ()
- double [getTime](#) ()

5.104.1 Detailed Description

Represents the result of a time step. It consists of a value S, that is the one we have the end of the step, and a time length.

Parameters

<S>	
-----	--

5.104.2 Constructor & Destructor Documentation

5.104.2.1 TimeStep()

```
quasylib.sibilla.core.models.TimeStep< S >.TimeStep (
    double time,
    S value )
```

Creates a new time step with a specified length and value.

Parameters

<i>time</i>	the length of time step. This value must be greater than 0.
<i>value</i>	the value at the end of time step. This must be a non null value.

5.104.3 Member Function Documentation

5.104.3.1 getTime()

```
double quasylib.sibilla.core.models.TimeStep< S >.getTime ( )
```

Returns the length of time step.

Returns

the length of time step.

5.104.3.2 getValue()

```
S quasylib.sibilla.core.models.TimeStep< S >.getValue ( )
```

Returns the value at the end of time step.

Returns

the value at the end of time step.

```
quasylab.sibilla.core.simulator.Trajectory< S extends State >.Trajectory ( )
```

5.105.3 Member Function Documentation

5.105.3.1 `add()`

```
void quasylab.sibilla.core.simulator.Trajectory< S extends State >.add (
    double time,
    S value )
```

5.105.3.2 getEnd()

```
double quasylab.sibilla.core.simulator.Trajectory< S extends State >.getEnd ( )
```

5.105.3.3 getGenerationTime()

```
long quasylab.sibilla.core.simulator.Trajectory< S extends State >.getGenerationTime ( )
```

Returns

the generationTime

5.105.3.4 getStart()

```
double quasylab.sibilla.core.simulator.Trajectory< S extends State >.getStart ( )
```

5.105.3.5 isSuccesfull()

```
boolean quasylab.sibilla.core.simulator.Trajectory< S extends State >.isSuccesfull ( )
```

Returns

the succesfull

5.105.3.6 sample()

```
void quasylab.sibilla.core.simulator.Trajectory< S extends State >.sample (
    SamplingFunction< S > f )
```

5.105.3.7 setGenerationTime()

```
void quasylab.sibilla.core.simulator.Trajectory< S extends State >.setGenerationTime (
    long generationTime )
```

Parameters

<i>generationTime</i>	the generationTime to set
-----------------------	---------------------------

5.105.3.8 setSuccessful()

```
void quasylib.sibilla.core.simulator.Trajectory< S extends State >.setSuccessful (
    boolean successfull )
```

Parameters

<i>successfull</i>	the successfull to set
--------------------	------------------------

5.105.3.9 size()

```
int quasylib.sibilla.core.simulator.Trajectory< S extends State >.size ( )
```

5.109 quasylib.sibilla.core.network.communication.UDPDefaultNetworkManager Class Reference

Inheritance diagram for quasylib.sibilla.core.network.communication.UDPDefaultNetworkManager:

Public Member Functions

- [UDPDefaultNetworkManager](#) (DatagramSocket socket)
- byte[] [readObject](#) () throws IOException
- void [writeObject](#) (byte[] toWrite, InetAddress address, int port) throws IOException
- void [closeConnection](#) () throws IOException

Additional Inherited Members

5.109.1 Detailed Description

Simple communication class based upon the UDP transport protocol.

Author

Stelluti Francesco Pio
Zamponi Marco

5.109.2 Constructor & Destructor Documentation

5.109.2.1 UDPDefaultNetworkManager()

```
quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager.UDPDefaultNetworkManager
(
    DatagramSocket socket )
```

Initiates the manager as a client. The socket upon which the communication is based has already been built.

Parameters

<i>socket</i>	upon which the network communication will be based
---------------	--

5.109.3 Member Function Documentation

5.109.3.1 closeConnection()

```
void quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager.closeConnection ( )
throws IOException
```

Closes the network communication.

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.UDPNetworkManager](#).

5.109.3.2 readObject()

```
byte [] quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager.readObject ( )  
throws IOException
```

Reads incoming data from the network.

Returns

byte array of the data read from the network

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.UDPNetworkManager](#).

5.109.3.3 writeObject()

```
void quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager.writeObject (   
    byte[] toWrite,  
    InetAddress address,  
    int port ) throws IOException
```

Sends data through the network.

Parameters

<i>toWrite</i>	byte array of data that will be sent over
<i>address</i>	used as destination of the data
<i>port</i>	used as destination of the data

Exceptions

<i>IOException</i>	
--------------------	--

Implements [quasylab.sibilla.core.network.communication.UDPNetworkManager](#).

5.110 quasylab.sibilla.core.network.communication.UDPNetworkManager Interface Reference

Inheritance diagram for quasylab.sibilla.core.network.communication.UDPNetworkManager:

Public Member Functions

- byte[] [readObject](#) () throws IOException
- void [writeObject](#) (byte[] toWrite, InetAddress address, int port) throws IOException
- void [closeConnection](#) () throws IOException

Static Public Member Functions

- static [UDPNetworkManager createNetworkManager](#) ([NetworkInfo](#) info, boolean toBroadcast) throws SocketException
- static [UDPNetworkManager createNetworkManager](#) ([UDPNetworkManagerType](#) networkType, DatagramSocket datagramSocket)

5.110.1 Detailed Description

Interface that needs to be extended from all of the communication related classes that are based upon the UDP transport protocol.

Author

Stelluti Francesco Pio
Zamponi Marco

5.110.2 Member Function Documentation

5.110.2.1 closeConnection()

```
void quasylab.sibilla.core.network.communication.UDPNetworkManager.closeConnection ( ) throws
IOException
```

Closes the network communication.

Exceptions

<i>IOException</i>	
--------------------	--

Implemented in [quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager](#).

5.110.2.2 createNetworkManager() [1/2]

```
static UDPNetworkManager quasylab.sibilla.core.network.communication.UDPNetworkManager.↵  
createNetworkManager (   
    NetworkInfo info,   
    boolean toBroadcast ) throws SocketException [static]
```

Factory method used to obtain [quasylab.sibilla.core.network.communication.TCPNetworkManager](#) implementations' instances. Used in classes that want to initiate a network communication.

Parameters

<i>info</i>	The network related infos about the connection that the manager will manage
<i>toBroadcast</i>	to mark if the manager will have to send broadcast messages

Returns

[quasylab.sibilla.core.network.communication.UDPNetworkManager](#) that will manage the requested connection

Exceptions

<i>SocketException</i>	
------------------------	--

5.110.2.3 createNetworkManager() [2/2]

```
static UDPNetworkManager quasylab.sibilla.core.network.communication.UDPNetworkManager.↵  
createNetworkManager (   
    UDPNetworkManagerType networkType,   
    DatagramSocket datagramSocket ) [static]
```

Factory method used to obtain [quasylab.sibilla.core.network.communication.TCPNetworkManager](#) implementations' instances. Used in classes that want to initiate a network communication.

Parameters

<i>networkType</i>	the type associated with the implementation of quasylab.sibilla.core.network.communication.UDPNetworkManager that will be instantiated
<i>datagramSocket</i>	upon which the network communication will be based

Returns

quasylab.sibilla.core.network.communication.UDPNetworkManager that will manage the requested connection

5.110.2.4 readObject()

```
byte [] quasylab.sibilla.core.network.communication.UDPNetworkManager.readObject ( ) throws
IOException
```

Reads incoming data from the network.

Returns

byte array of the data read from the network

Exceptions

<i>IOException</i>	
--------------------	--

Implemented in [quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager](#).

5.110.2.5 writeObject()

```
void quasylab.sibilla.core.network.communication.UDPNetworkManager.writeObject (
    byte[] toWrite,
    InetAddress address,
    int port ) throws IOException
```

Sends data through the network.

Parameters

<i>toWrite</i>	byte array of data that will be sent over
<i>address</i>	used as destination of the data
<i>port</i>	used as destination of the data

Exceptions

<i>IOException</i>	
--------------------	--

Implemented in [quasylab.sibilla.core.network.communication.UDPDefaultNetworkManager](#).

5.111 `quasylab.sibilla.core.network.communication.UDPNetworkManagerType` ManagerType Enum Reference

Inheritance diagram for `quasylab.sibilla.core.network.communication.UDPNetworkManagerType`:

Public Attributes

- [DEFAULT](#)

5.111.1 Detailed Description

All of the names associated to the classes that implement [quasylab.sibilla.core.network.communication.UDPNetworkManager](#) and are based upon the UDP transport protocol.

Author

Stelluti Francesco Pio
Zamponi Marco

5.112.1 Detailed Description

Author

loreti

Parameters

<S>	
-----	--

5.112.2 Constructor & Destructor Documentation

5.112.2.1 UnboundedReachabilitySolver() [1/2]

```
quasylab.sibilla.core.markov.UnboundedReachabilitySolver< S >.UnboundedReachabilitySolver (
    MarkovChain< S > chain,
    Predicate< S > condition,
    Predicate< S > goal )
```

5.112.2.2 UnboundedReachabilitySolver() [2/2]

```
quasylab.sibilla.core.markov.UnboundedReachabilitySolver< S >.UnboundedReachabilitySolver (
    MarkovChain< S > chain,
    Predicate< S > goal )
```

5.112.3 Member Function Documentation

5.112.3.1 compute()

```
Map<S,Double> quasylab.sibilla.core.markov.UnboundedReachabilitySolver< S >.compute ( )
```

5.113 quasylab.sibilla.core.models.pm.UnicastRule.UnicastReceiver Class Reference

Public Member Functions

- [UnicastReceiver](#) (int receiver, Function< [PopulationState](#), Double > receivingProbability, Function< RandomGenerator, Integer > step)
- int [getReceiver](#) ()

5.113.1 Constructor & Destructor Documentation

5.113.1.1 UnicastReceiver()

```
quasylab.sibilla.core.models.pm.UnicastRule.UnicastReceiver.UnicastReceiver (
    int receiver,
    Function< PopulationState, Double > receivingProbability,
    Function< RandomGenerator, Integer > step )
```

Parameters

<i>receiver</i>	
<i>receivingProbability</i>	

5.113.2 Member Function Documentation

5.113.2.1 getReceiver()

```
int quasylib.sibilla.core.models.pm.UnicastRule.UnicastReceiver.getReceiver ( )
```

Returns

the receiver

5.114 quasylib.sibilla.core.models.pm.UnicastRule Class Reference

Inheritance diagram for quasylib.sibilla.core.models.pm.UnicastRule:

Classes

- class [UnicastReceiver](#)

Public Member Functions

5.114.1 Detailed Description

Author

loreti

5.114.2 Constructor & Destructor Documentation

5.114.2.1 UnicastRule()

```
quasylib.sibilla.core.models.pm.UnicastRule.UnicastRule (
    String name,
    Function< PopulationState, Double > rateFunction,
    int senderIndex,
    Function< RandomGenerator, Integer > step,
    UnicastReceiver ... receivers )
```

Parameters

<i>rateFunction</i>	
<i>senderIndex</i>	
<i>receivers</i>	

5.114.3 Member Function Documentation

5.114.3.1 apply()

```
PopulationTransition quasylib.sibilla.core.models.pm.UnicastRule.apply (
    RandomGenerator r,
    double now,
    PopulationState state )
```

Parameters

<i>r</i>	
<i>state</i>	

Returns

null if the rule cannot be applied.

Implements [quasylib.sibilla.core.models.pm.PopulationRule](#).

5.114.3.2 getDrift()

```
static Update quasylab.sibilla.core.models.pm.UnicastRule.getDrift (
    String name,
    RandomGenerator r,
    int sender,
    PopulationState state,
    Function< RandomGenerator, Integer > step,
    UnicastReceiver[] receivers ) [static]
```

5.114.3.3 isEnabled()

```
boolean quasylab.sibilla.core.models.pm.UnicastRule.isEnabled (
    PopulationState state )
```
